The mean pressure of the seven days ... 29.963
 The average pressure of the corresponding period for 20 years ... 29.924

⊖
 The mean temperature of the seven days ... 74.7
 The average temperature of the corresponding period for 20 years ... 77.3
 The extreme variation of temperature during the seven days ... 20.7
 The maximum temperature during the seven days ... 86.0

%
 The mean relative humidity during the seven days ... 77
 The average relative humidity of the corresponding period for 24 years ... 74

Inches.
 The total fall of rain from 4th to 10th November ... Nil.
 The average fall of the corresponding period for 24 years ... 0.37
 The total fall from 1st January to 10th November ... 61.11
 The average fall of the corresponding period for 24 years ... 65.36

The mean pressure, temperature, &c., are deduced from observations made at 6h., 10h., 16h. and 22h.; the maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard (Newman's No. 86) formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The direction and movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

w dew, f fog.

HENRY F. BLANFORD,
 Meteorological Reporter to the Government of India.

CULTIVATION OF SUN-FLOWER AND OF GROUND-NUTS.

Nos. 514C. to 524C., dated Calcutta, the 2nd November 1877.

RESOLUTION—By the Government of India, Department of Revenue, Agriculture, and Commerce.

READ—

A letter from the Chief Commissioner of Mysore, No. 5502-G133, dated the 30th August 1877, forwarding a report by the Superintendent of the Experimental Farm at Bangalore on the cultivation of the sun-flower (*Helianthus annuus*) and the uses of the oil extracted from the seed.

1. The cultivation of the sun-flower plant was undertaken in this country to test its value in the reclamation of marshy land and the removal of malaria.

2. In Bangalore the plant has now been in continuous cultivation for some years, without any particularly successful results. As a destroyer of malaria, it is certain that the plant possesses no special value, and the statements on which the experiments were first undertaken have been found to be fictitious. The truth seems to be that the marvellous effects which are sometimes attributed to plants (as in the case of the sun-flower and the blue gum

of Australia) as sanitary agents are due more to the clearing and drainage which are required before the plants can be successfully grown than to any peculiar virtues inherent in the plants themselves.

3. Oil of a very beautiful appearance has been extracted from the sun-flower in Bangalore, but the cost of extraction is prohibitive against its use; and, moreover, it has been generally condemned by those to whom samples were furnished for experiment as being ill adapted either for table use or for machinery. It is understood that large quantities of sun-flower seed are produced in Russia for the sake of the oil, which is in considerable demand for the lubrication of machinery. But, however this may be, it is clear that the cost of production in this country, so far as the experiments have gone, will not permit of the profitable cultivation of the plant.

4. The Chief Commissioner of Mysore thinks that, in order to investigate the properties of the plant to the fullest extent, further experiments, suggested by the Superintendent of the Government Farm in Bangalore should be made, the objects to be determined being (1) to ascertain whether the plant can be grown as an ordinary agricultural crop, so as to compete with the usual oil-seed crops cultivated by natives, and (2) to determine the value of the oil by chemical analysis in England.

5. The Governor-General in Council does not object to the proposed experiments being undertaken, a quantity of the oil being prepared for chemical analysis and for submission to the trade. But this quantity having been prepared, it does not seem necessary to continue the experimental cultivation, pending the receipt of reports on it. If they should be favourable, the cultivation may be easily resumed. In the proposed experiment, particular attention should be given to the matter of cost, which should be carefully recorded.

6. In connection with this subject, the Governor-General in Council thinks it opportune to record his opinion that it is of more importance to stimulate and develop the production of articles already known in the country than to initiate costly experiments in articles not commercially known and of which the ultimate success is problematical. One of these articles is the ground-nut (*Arachis hypogæa*). The kernel of the pod of this plant produces a very large proportion of excellent oil, extensively used in Europe as well as in this country. The plant grows abundantly in the Madras Presidency and elsewhere, but it does not seem to be fully utilized. The exports of the nut to foreign countries in 1875-76 were—from Madras 6,994 cwt., value Rs. 29,774, and from Bombay 3,721 cwt., value Rs. 13,845. From Bengal the exports have been so trifling that they have not been separately distinguished. The plant is grown to some extent in Burma, but not sufficiently for local consumption, and quantities are imported from Madras.

Although the exports to foreign countries from British India are trifling, considerable quantities are sent from Pondicherry to France, as will be seen from the following figures which have been extracted from the French Trade Returns of 1875:—

Imports from British India—1,231,803 kilos., value 406,494 francs.

Imports from French India—6,404,899 kilos., value 2,143,616 francs.

The total imports into France in the year from all countries were 101,524,468 kilos., or nearly 100,000 tons, worth 33,503,000 francs.

Thus out of this total value of 33½ million francs only 2½ millions stand against India, of which French India has by far the largest share. Nearly all the rest is imported from the western coast of Africa.

7. The French trade in ground-nuts is a large and increasing one, the extraction of the oil, which is in considerable demand for the manufacture of soap, for consumption as food, and for other purposes, being conducted on a large scale at Marseilles. If the cultivation can be developed in this country, it seems probable that British India should be able to compete with Africa and supply France with a very considerable part of her requirements of this article, adding the ground-nut to other oil-seeds, such as gingelly and rape, which are now exported to France in great quantities.

8. The Governor-General in Council requests that the local Governments will be good enough to obtain particulars of the extent of its cultivation in their provinces, and to report them with any particulars they can ascertain as to the consumption of the seed and oil in the country. His Excellency in Council will also be glad to be favoured with any suggestions they may wish to make as to possible development of the cultivation and trade. In the maritime provinces it is desirable that the export trade should be recorded in the monthly and annual returns, and this should be done with effect from the 1st of April next in both the foreign and coasting trade returns.

ORDER.—Ordered that a copy of this resolution be forwarded to the Governments

and Administrations noted on the margin for information and guidance.

ABSTRACT OF REPORTS ON DISTRICT STOCKS OF RICE, &c., AND MOVEMENTS OF PRICE IN BENGAL, RECEIVED UP TO THE 20TH NOVEMBER 1877.

N. B.—No reliance can be placed on the accuracy of figured estimates of stocks in the interior; at best a rough approximation is all that can be expected.

Burdwan, 17th November 1877.—The exports of food-grains from Burdwan were 2,350 maunds, and from Bood-Bood 1,600 maunds.

Bankoora, 17th November 1877.—No exportation of rice was reported during the week.

Beerbhoom, 19th November 1877.—Stocks of food-grains seem to be very low. The price of common rice has slightly risen; it ranges from 16½ to 23 seers per rupee.

Hooghly, 17th November 1877.—No import during the week. Exports from Chander-nagore and other places on the Hooghly are estimated at about 3,000 maunds. The stock in hand is about 75,000 maunds. Prices are stationary.

Howrah, 19th November 1877.—Common rice has again cheapened slightly in the interior; it now sells at about Rs. 2-8 per maund. Trade is inactive.

24-Pergunnahs, 17th November 1877.—The supply of food-grains seems to be sufficient in all sub-divisions.

Nuddea, 17th November 1877.—In Kooshtea the imports of food-grains were 5,470 maunds, and the exports by rail to Calcutta 355 maunds during the week. In Meherpore 360 maunds were imported. No exports from Bongong. 157 maunds of rice were imported from the east into Chooadanga. In Ranaghat 800 maunds were imported. The imports into the sudder sub-division have consisted of 2,800 maunds of rice, 257 maunds of cereals, and 550 maunds of pulses; the exports were 187 maunds of rice, 87 maunds of cereals, and 494 maunds of pulses. The trade to Calcutta appears to be rapidly falling off. Coarse rice is generally procurable at Rs. 2 per maund, it is cheaper at Hanskhali, namely Rs. 1-12 per maund.

Jessore, 17th November 1877.—The stocks of food-grains in the district are sufficient, and very little importation is going on.

Moorshedabad, 17th November 1877.—The river returns show:—Imports—rice 22,690 maunds, paddy 1,900 maunds, wheat 2,316 maunds, gram and pulses 14,672 maunds. Exports—rice 15,850 maunds, paddy 700 maunds, wheat 1,370 maunds, gram and pulses 4,825 maunds. The prices are:—at Berhampore common rice is 14 to 17 seers, at Lalbagh 13 seers, at Jungypore 17 to 19 seers, and at Rampore Hât 1½ seers per rupee. Coarse rice at Berhampore and Lalbagh 19 seers, and at Jungypore 19 to 23 seers per rupee.

Rajshahye, 17th November 1877.—6,307½ maunds of rice and 1,761 maunds of pulses were exported. The stock of rice available for exportation is about 3½ lakhs of maunds. The price of common rice has risen from 21½ and 22½ seers to 19½ and 21½ seers per rupee, and of best rice from 12 to 10½ and 12 seers per rupee.

Rungpore, 16th November 1877.—No change in the price of rice since last report, and exportation appears to have decreased.

Bogra, 17th November 1877.—792 maunds of rice were exported to Calcutta, and a small quantity to Pubna and Rajshahye. 500 maunds were imported from Dinagapore. Rice is on the whole cheaper throughout the district.

Pubna, 17th November 1877.—In Pubna town coarse rice is sold at Rs. 2, *poorbee* at Rs. 2-1, paddy at Rs. 1-3, wheat at Rs. 2-2 per maund; there have been no exports or imports. At Dulai *aus* rice is 19 seers, *amun* 21 seers, *amun* paddy one maund and *aus* paddy 28 seers per rupee. At Mothoora, rice is 18 seers and paddy 37 seers per rupee. At Chatmohur *amun* rice is Rs. 1-10, *aus* Rs. 1-6, *poorbee* Rs. 1-12, and *Amun* paddy 12 *annas* per maund. At Serajgunge, *amun* rice is Rs. 3-1 or Rs. 3-2, *aus* Rs. 2-8 or Rs. 2-10, *amun* paddy Re. 1 or Rs. 1-1 per maund; about 2,000 maunds of rice were exported to Calcutta. At Shazadpore, rice is sold at Rs. 2-11 and paddy at Rs. 1-5 per maund. At Raigunge rice is at 15 seers and paddy at 28 seers per rupee.

Darjeeling, 17th November 1877.—The prices of every description of rice are falling. The supply is well kept up.

Cooch Behar, 15th November 1877.—The prices of food-grains remain unchanged. No exportation or importation is taking place. Supplies are abundant.

Dacca, 18th November 1877.—The supplies of food-grains are plentiful. There have been no exports except to Chittagong, Backergunge, and Noakhally. In the district generally prices of rice are Rs. 2-8 to 3 per maund; at Naraingunge Rs. 2-5 to Rs. 2-11-9 per maund.

Furreedpore, 17th November 1877.—The price of rice varies from 19 seers per rupee at Goalundo to 12 seers per rupee in some parts of the south of the district. Importation is less brisk than usual at this season. There was very little exportation.

Backergunge, 15th November 1877.—Prices of rice are high:—at Burisal Rs. 4, at Jhalakati Rs. 4-8 to Rs. 4-12, at Backergunge Rs. 4-12, at Perozepore Rs. 5, and at Bhola Rs. 3-4 to Rs. 3-8 per maund. The supply of food-grains continues to come into the district, and an importation of 29,011 maunds is reported during the week ending the 10th instant.

Tipperah, 16th November 1877.—Prices of rice vary from Rs. 2-6 to Rs. 3-4 per maund in the various marts. Exports continue.

Chittagong, 15th November 1877.—No exportation of rice to Calcutta during the week.

Noakhally, 15th November 1877.—The prices of food-grains are the same as reported last week. Coarse rice is 13 or 14 seers per rupee. The supplies in the markets are fair.

Importation is slack. There was some exportation from Fenny station to Chittagong, and from Begumgunge to Calcutta and Chittagong.

Chittagong Hill Tracts, 13th November 1877.—At Rangamatia rice is sold at Rs. 3-8 to Rs. 4 per maund, and at Ramghur, in the Fenny valley, at Rs. 3-4 per maund. At Cox's Bazar and Sungoo the prices are the same as last week.

Hill Tipperah, 14th November 1877.—At Agartalla common rice is 19 seers per rupee. Supplies continue to increase. New *amun* is coming into the markets.

Gya, 17th November 1877.—Prices are stationary throughout the district. Some exports are reported from the district.

Mozufferpore, 17th November 1877.—Exportations of food-grains are going on. Prices are slightly rising.

Sarun, 17th November 1877.—The imports of food-grains during the week from Mozufferpore, Patna, Fyzabad, Nowabgunge, Purneah, and Shahabad amounted to 11,810 maunds, and the exports were 2,000 maunds of wheat to Calcutta, and 500 maunds of gram to Fyzabad. The stock in hand was 62,397 maunds. The prices were—wheat 14 seers, best rice 8½ seers, common rice 12 seers per rupee, &c.

Chumparun, 17th November 1877.—Prices of food-grains are generally rising considerably, but somewhat fluctuating. Some exports are reported.

Monghyr, 17th November 1877.—The stock of food-grains at the different marts during the week consisted of rice 19,250 maunds, rahur pulse 7,474 maunds, wheat 30,882 maunds, paddy 9,765 maunds, gram 7,467 maunds, &c.

Bhagulpore, 18th November 1877.—The stock of food-grains is much the same as last week; no large transactions are recorded.

Purneah, 17th November 1877.—The exportation of food-grains to Calcutta continues, especially from the town of Purneah, and Kusba.

Maldah, 17th November 1877.—The prices of common rice are about the same as last week.

Sonthal Pergunnahs, 15th November 1877.—The supply of food-grains in the different marts in Deoghur sub-division consisted of paddy 87 maunds, common rice 275 maunds, Indian-corn 1,017 maunds, &c. 150 maunds of rice and 940 maunds of Indian-corn have been exported to the North-West Provinces from this sub-division.

Cuttack, 17th November 1877.—The exports during the week amounted to only 298 maunds to Cochin, as against 13,351 maunds to Madras and Bombay last week. The more hopeful reports from Madras have given a decided check to the purchasers for exports to Madras ports. The stocks at the sudder sub-division are reported at 90,000 maunds, which will leave a large margin for export if required. Prices are still high; there is a temporary lull in the markets, as the mahajuns are uncertain whether to ship the rice for Madras or to sell it at the locality at the fairly high rates prevailing.

Poores, 15th November 1877.—The supply of rice to inland markets is not sufficient; prices have risen. In Khoordah rice is cheaper, owing to the arrival of 5,000 maunds of unhusked rice sent for sale in the Government estate. Prices are 9 to 17½ seers per rupee. No exports by sea.

Balasore, 16th November 1877.—Exports of food-grains during the week consisted of 18,214 maunds of rice from Balasore to the Madras Presidency, and 550 maunds of rice and 1,900 maunds of paddy to Calcutta. Up to the 10th instant the exports from Chandbally consisted of 1,888 maunds of rice to Maldives, and 244 maunds of rice and 954 maunds of paddy to Calcutta. At Chandbally the price of clear red rice was Rs. 1-12 per maund on the 9th idem, and at Balasore it has been Rs. 1-13 throughout the week. Stocks held by merchants at Balasore amount to 87,326 maunds of rice.

Hazareebagh, 16th November 1877.—Supply of food-grains is ample. Little or no export. Prices are unaltered.

Lohardugga, 17th November 1877.—Supply of food-grains is abundant; exportation continues.

Singbhoon, 16th November 1877.—The supply of food-grains is plentiful. Coarse rice is sold at 32 seers per rupee. Exportation is insignificant.

Manbhoom, 17th November 1877.—Ample supply of food-grains. No exportation.

A. MACKENZIE,

Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 17th November 1877.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIVN.	1 Burdwan, Nov. 17 '77	Nil	No rain. No change in the prospects of the crops since last week. Fever is still very prevalent.
	2 Bankoora, „ 17 „	Nil	Weather—clear and cool. No change to report in the prospects of the crops. The cutting of the <i>aman</i> crops is in progress.
	3 Beerbhoom, „ 19 „	Nil	Weather—fine; rather warm for the time of year. No change to report in the state and prospects of the crops.
	4 Midnapore, „ 17 „	Nil	Weather—seasonable though a little warm. Prospects of the crops are moderate. Fever is extensively prevalent, though not very fatal.
	5 Hooghly, „ 17 „	Nil	Weather—seasonable. Late rice on the high lands is suffering from want of rain. Sowings of <i>rubbee</i> crops are going on. Indigo, potato and <i>kalai</i> have germinated in places. Fever is prevalent.
	Howrah, „ 19 „	Nil	Weather—seasonable, with wind from the north. No improvement in the high-land crops; the rice in the low lands is good.
<i>Central Districts.</i>			
PRESIDENCY DIVN.	6 24-Pergunnahs, Nov. 17 '77	Nil	Weather—seasonable and fair. Prospects of the crops are good. Cholera is abating. Ordinary fever prevails at Barripore.
	7 Nuddea, „ 17 „	Nil	Weather—seasonable. No rain. <i>Aman</i> rice and winter crops are said to be promising well in all directions. Rain would however be advantageous. Cholera is still prevalent in Choodangah.
	8 Jessore, „ 17 „	Nil	Weather—bright and clear. Mornings and nights are cold. Prospects are favourable, but a little more rain would have done a great deal of good to the <i>aman</i> crop. As it is, the <i>aman</i> on the higher lands will suffer much from the early cessation of the rain. The cold-weather crops in the ground are doing well. Fever of a severe type is prevalent throughout the district, and sporadic cases of cholera are heard of.
RAJSHAHY AND COOCH BEHAR DIVN.	9 Moorshedabad, „ 17 „	Nil	Weather—somewhat too hot to be seasonable. Harvest prospects of <i>aman</i> rice continue generally favourable. State of spring crops is reported to be good. Cholera has appeared in four station circles, and there is much illness in Berhampore.
	10 Dinagopore, „ 16 „	Nil	Weather—seasonable. North-east wind prevailing. Rice is ripening fast, also the pulses. Fields have been prepared for mustard. Prospects are good.
	11 Rajshahye, „ 17 „	Nil	The cutting of <i>dhan</i> has commenced; the outturn of the crop is expected to be good. The condition of the <i>rubbee</i> crops is good. Fever is still prevalent in the district, and some cases of cholera have been reported.
	12 Rangpore, „ 16 „	Nil	Weather—seasonable. State and prospects of the crops continue to be excellent. Land is being ploughed for the <i>rubbee</i> . Cholera at Bhowanigunge shows no signs of extending itself; cases of mild ague are rather common.
	13 Bogra, „ 17 „	Nil	Weather—clear and moderately cold with heavy dew at night. No rain. <i>Aman</i> and other standing crops look promising, and will, it is hoped, turn out well. Gram, mustard, and <i>kalai</i> , are being sown. No change in the health of the district since the last report. Cholera of a bad type is still going on in parts of the district.
	14 Pubna, „ 17 „	Nil	Weather—fine and seasonable. State and prospects of the crops are good, but a little more rain is wanted for the <i>aman</i> crop. Fever is prevalent in the town. Report from Serajgunge not received.
	15 Darjeeling, „ 16 „	Nil	Bright weather during the early part of the week; towards the end it has been hazy and threatening rain. <i>Haimunti</i> rice is in ear and promises a very fair outturn. The minor crops of <i>kalai</i> , buck-wheat, and the millets, are all progressing favourably.
	16 Julpigoree, „ 17 „	Nil	Weather—seasonable. Nights are cool. Prospects of the winter rice are good. Transplantation of the tobacco plants has commenced. In some places lands are being prepared for mustard and wheat, and in some the sowing of the former is finished. Within Julpigoree station <i>kulti kalai</i> is already reaped. Public health is bad. Fever is prevalent in the town of Julpigoree.
	Cooch Behar, „ 15 „	Nil	Weather—fair and cool. Prospects of the crops are not bad. Public health is good.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—(Continued.)			
Eastern Districts.			
DACCA DIVA.	17 Dacca, Nov. 18 '77	Nil	Weather—rather warm for the season. Prospects are favourable. Rice harvest is going on rapidly.
	18 Furreedpore, „ 17 „	Nil	Weather—fair but not so cold as usual at this time. No change in the prospects of the crops. Rain is required for the preparation of the ground for the cold weather crops. Winter rice is being cut; a half crop may be gathered.
	19 Backergunge, „ 15 „	Nil	The continued drought has undoubtedly damaged the <i>amun</i> crop, particularly on the high lands, but the general outturn will be 13 or 14 annas, provided there be no storm of wind when the ears are ripening. Prices still continue high. Fever in a sporadic form exists in many places. The health of the cattle is everywhere good.
	20 Mymensingh, „ 16 „	Nil	Weather—warm for the season of year. State and prospects of the crops are satisfactory.
	21 Tipperah, „ 16 „	Nil	Weather—fine and cool. Prospects of the winter rice are very good.
CHITTAGONG DIVA.	22 Chittagong, „ 15 „	Nil	Weather—close and hot on the 13th, 14th, and 15th; heavy clouds about, as if storm were brewing. State and prospects of the crops are very good.
	23 Noakholly, „ 15 „	Nil	Weather—seasonable. The <i>amun</i> crop is progressing favorably. Cultivation of the cold weather crops is going on. Public health is good.
	24 Chittagong Hill Tracts, „ 13 „	Nil	Weather—seasonable throughout the week. The paddy transplanted by the plough cultivators is ripening. Lands are being ploughed for mustard, tobacco, and other cold-weather crops.
	Hill Tipperah, „ 14 „	Nil	Weather—dry and cool. Some <i>amun</i> crops have been already cut; others are nearly ripe. Prices have fallen owing to the cutting of new crops.
BEHAR.			
PATNA DIVISION.	25 Patna, Nov. 17 '77	Nil	Weather—unusually hot for this time of year. A little rain would now do good, but the prospects of the crops continue fair.
	26 Gya, „ 17 „	Nil	Weather—clear, and latterly in the day time unusually hot for the time of year. Maximum thermometer in the shade 89° 8'. Prospects of <i>khureef</i> and <i>rubbee</i> are unchanged. <i>Rubbee</i> sowings are nearly completed. <i>Kartika dhan</i> is being reaped and threshed. The outturn in Nowada is estimated at ten annas.
	27 Shahabad, „ 17 „	Nil	Weather—rather unseasonable, being hot during day. No rain throughout the district. In Bhubbannah the rice crop saved by irrigation is being reaped. <i>Rubbee</i> sowings are progressing favourably. Sugarcane is improving. In Bazar the <i>rubbee</i> is being sown and is germinating. The cultivators are taking canal water wherever available. In Samserain the <i>rubbee</i> sown has germinated, but is suffering from want of rain, except in places where canal water is available. In the head-quarters sub-division the canal water has saved the rice crop. <i>Rubbee</i> sowings are being pushed on. Public health is good.
	28 Durbhanga, „ 17 „	Nil	Weather—seasonable. The <i>rubbee</i> is germinating well. The rice crop on high lands appears to fall under the average. Tobacco is growing well.
	29 Mozufferpore, „ 17 „	Nil	Weather—cool and clear. In the Sudder sub-division there is no change to report in the prospects of the rice crop. The young <i>rubbee</i> crops are in fair condition. In the Sestamarbee sub-division the prospects of the rice crop are getting worse day by day, and there is much want of moisture for the <i>rubbee</i> crops. Prospects of the crops in Targanee pergunnah, outpost Belsund, are fair. In the Hajespore sub-division the prospects of <i>dhan</i> and <i>rubbee</i> crops are good. Rain is wanted for the <i>rubbee</i> .
	30 Sarun, „ 17 „	Nil	Weather—bright and clear. No signs of rain. East wind prevailing. Prospects of the <i>rubbee</i> crops continue favourable, but rain is much wanted to promote their growth. <i>Aghani</i> rice that has been sown is fast ripening. Sugarcane is being cut and put into the mills. Indigo fields are being prepared for next year. Poppy is being sown. Prices are stationary. Public health is good.
	31 Champaran, „ 17 „	Nil	Weather—seasonable, but rather warmer than usual. State and prospects of the crops are generally bad. Much rice has been cut for fodder. Trustworthy information has now been had from over a large tract in the south. The rice crop is an almost complete failure here. The <i>dhadoi</i> was at best 6 annas, and the <i>kodo</i> , &c., reaped a little later, hardly better. About half the <i>rubbee</i> lands have been sown; and the seed that has been sown has come up badly, except in some few low irrigated places. Unless moderate rain falls soon the seedlings cannot last, nor can anything be done with the lands now fallow. Opium prospects in this tract are much worse than in 1873-74; the seed is not thought likely to germinate over more than quarter of the cultivation.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BEHAR.—(Continued.)			
BRAGULPORE DIV.	32. Monghyr, Nov. 17 ..	Nil	Weather—still hot with heavy dews at night. Prospects are the same as before. An eight-anna crop on the whole is expected.
	33. Bhagalpore, " 18 ..	Nil	Weather—cool in the morning and evening. Clear sky. Little wind. State and prospects of the crops are excellent. <i>Kartika</i> rice is being cut in places.
	34. Purneah, " 17 ..	Nil	Weather—fair. A fair outturn of the rice crop is expected. The <i>rubbee</i> prospects are also good. Fever is very prevalent.
	35. Maldah, " 17 ..	Nil	Weather—fair; rather hot for the time of year. State and prospects of the crops continue to be very fair on the whole. The highland rice in Khorba and Gajole is suffering somewhat, as was anticipated, from want of rain. Fever is very prevalent. A few sporadic cases of cholera reported.
	36. Sonthal Pergas., " 18 ..	Nil	Weather—warm. The rice crop is good everywhere. The highland rice in Deoghur is better than was expected. Rain will be wanted for the <i>rubbee</i> .
ORISSA.			
ORISSA DIV.	37. Cuttack, Nov. 17 ..	Nil	Weather—fine; rather warm for the time of year. No rain. In Jajpore and Kendrapara sub-divisions rain is wanted. <i>Laghu</i> crop is being cut, and the outturn is expected to be 14 annas. <i>Rubbee</i> crops are progressing fairly well. General health is good. Cholera is still reported from one Chukla and Kendrapara town.
	38. Poursa, " 15 ..	Nil	Weather—seasonable. In Khoordah rain is wanted for the high lands. The people of Khoordah are irrigating wherever they can. The <i>laghu</i> crop that survived the drought is being harvested. The <i>sarad</i> rice is in ear. Where irrigation is not possible in other parts of the district the rice plants on the higher lands are suffering. In general the <i>rubbee</i> , sugarcane, and other miscellaneous crops are thriving. In the tracts situated between the Chilka and the sea the condition of the people is worse than before. Nearly the entire rice crop will be lost for want of rain, and the outturn of <i>mandia</i> will for the same reason be but scanty. Relief is being given mainly from funds contributed by private individuals. Public health is good.
	39. Balasore, " 16 ..	Nil	Weather—clear and cold. Not more than a ten-anna crop is expected in most of the pergunnahs in the south of the district. Elsewhere the crops are fair.
CHOTA NAGPORE.			
South-West Frontier Agency.			
40.	Hazareebagh, Nov. 16 '77	Nil	Weather—seasonable. Settled fine. The wet crops are all being rapidly harvested. An average ten-anna crop is expected. Sugarcane promises well. <i>Rubbee</i> sowings are stopped for want of rain.
41.	Lohardugga, " 17 ..	Nil	Weather—seasonable and rapidly getting cold. No change to report. Harvest operations are in full swing. A fair general outturn of rice is expected over most of the district. More rain would do <i>rubbee</i> crops good, but so far prospects are on the whole moderately favourable in the Sudder sub-division. From Palamow prospects of <i>rubbee</i> crops are reported as uncertain.
42.	Singbhoom, " 16 ..	Nil	Weather—seasonable. The reaping of the <i>haimanti</i> paddy has now begun, and the anticipated yield for the entire district is reported to be eight annas. The cold-weather crops, as gram, wheat, pulses, and mustard, are doing well. Tassar culture is reported successful. The district is healthy.
43.	Manbhoom, " 17 ..	Nil	Weather—very cool and pleasant. No signs of rain. <i>Dhan</i> is being harvested and is reported a good average ten-anna crop. Rain is much needed for the <i>rubbee</i> crops, which are not promising.

Published for general information.

The mean pressure of the seven days	Inches.
The average pressure of the corresponding period for 20 years	30.008
			29.966

The mean temperature of the seven days	☉
The average temperature of the corresponding period for 20 years	72.5
The extreme variation of temperature during the seven days	75.6
The maximum temperature during the seven days	22.2
			84.7

The mean relative humidity during the seven days	%
The average relative humidity of the corresponding period for 24 years	75
			72

The total fall of rain from 11th to 17th November	Inches.
The average fall of the corresponding period for 24 years	Nil.
The total fall from 1st January to 17th November	0.14
The average fall of the corresponding period for 24 years	61.11
			65.50

The mean pressure, temperature, &c., are deduced from observations made at 6h., 10h., 16h. and 22h.; the maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard (Newman's No. 86) formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The direction and movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

f foggy, *w* dew, ☉ lunar corona.

HENRY F. BLANFORD,
Meteorological Reporter to the Government of India.

METEOROLOGICAL OFFICE, INDIA,

F. T. HAIG, Col., R.E.,
Joint Secy. to the Government of Bengal
in the P. W. Dept., Irrigation Branch.

Reports of Fluctuation of Traffic on the Eastern Bengal Railway for the Month of September 1877.

EASTERN BENGAL RAILWAY COMPANY, TRAFFIC SUPERINTENDENT'S OFFICE, SEALDAH TERMINUS.

Report on the Traffic for the five weeks ending the 29th September 1877.

Dated Calcutta, the 6th November 1877.

From—JAMES BRANDER, ESQ., Traffic Superintendent.

To—The Agent, Eastern Bengal Railway Company, Sealdah.

THE quantity of goods carried during the above period was maunds 14,28,518, as against maunds 10,68,695 during the same period of last year, showing an increase of maunds 3,59,823.

This increase is chiefly attributable to the increased quantities carried of the following staples, viz. grain, including rice, gunny bales, jute drums, railway materials, foreign piece-goods, seeds, twist and miscellaneous goods. The staples showing the largest decrease are gunny bundles, hides, jute bales, salt, tobacco and turmeric.

Increases.

Grain, including rice	Mds.	3,84,745
This increase is owing to the large quantities still being brought for shipment to the famine districts besides cereal for export.		
Gunny bales	Mds.	4,513
This is owing to the increased quantity of bags forwarded for export from the Serajgunge jute-mills, but is counterbalanced by the decrease of gunny bags in bundles, which amounts to maunds 4,452.		
Jute in drums	Mds.	4,895
Only show a very small increase, owing to the large quantity carried during the same period of last year.		
Piece-goods	Mds.	9,891
This staple shows again a satisfactory increase, the demand being great on account of the Dussorah holidays.		
Railway material	Mds.	9,954
This increase is owing to the quantities of materials still being forwarded for the Northern Bengal State Railway.		
Seeds	Mds.	15,708
The quantity carried of this staple, which showed a decrease last month, has again improved satisfactorily.		
Twist	Mds.	2,151
This shows a satisfactory increase, chiefly attributable to the quantity brought down for export from the Danbar Cotton Mills, Shemunggar.		
Miscellaneous goods	Mds.	47,631
This continues to show a satisfactory increase chiefly of upward goods.		

Decreases.

Gunny bundles	Mds.	4,452
This decrease is owing to the large demand in the interior for the transport of grain to the Calcutta market.		
Hides, bundles	Mds.	5,619
This decrease is owing to the demand for this commodity varying very much in the market.		
Jute bales	Mds.	66,852
This decrease is attributable partly to the backwardness of the season, but chiefly to dullness of the market in England.		
Salt	Mds.	16,799
This staple still shows a large decrease in the quantity forwarded, but I am glad to say is again improving.		
Tobacco	Mds.	13,628
Turmeric	Mds.	10,757
These articles show a large decrease owing to there being little or no demand in the market. I attach the usual statement showing the increase and decrease of the principal staples.		

Statement of Increases and Decreases in maundage of staples carried by the Eastern Bengal Railway Company for the five weeks ending the 29th September 1877, in comparison with that of the corresponding period of 1876.

STAPLES.	1876.		1877		1876.	1877.	Increase.	Decrease.

RESOLUTION ON THE GENERAL REPORT, BURDWAN DIVISION, FOR 1876-77.

(GENERAL DEPARTMENT—MISCELLANEOUS—No. 3261.)

Calcutta, the 24th November 1877.

READ—

The General Report of the Burdwan Division for 1876-77.

THE report, which has been drawn up by the Officiating Commissioner, Mr. A. Smith, is submitted long after date, and is even now incomplete, owing to the omission of all information relating to the district of Hooghly. It is stated that the late Magistrate of Hooghly, Sir W. Herschel, after delaying his report until the eve of his departure on furlough, took away the materials with him, promising to submit it before he actually left the country. This, however, he failed to do, and the most important district in the division has therefore been ignored in the Commissioner's report. Sir W. Herschel will be called upon by Government to explain his omission.

2. The duties of mofussil inspection seem to have been properly attended to by every Magistrate in the division, except Mr. Trevor Grant of Howrah. Mr. Grant pleads sickness as his excuse for not making any tour during the year of report, but

Annual tours.

the Lieutenant-Governor cannot accept this as a sufficient apology for the entire neglect of a very important duty. If Mr. Grant was unequal to the proper and efficient performance of his work, he should have taken leave.

3. The rainfall of the year, though in most districts below that of 1875-76, was still in excess of the average. Unfortunately its distribution was not altogether seasonable. In

Weather and crops. Burdwan there was a short fall in April and May, while continued heavy showers in the latter part of the season produced heavy floods on the Bhagirathi and Adjai. In Midnapore also there were two severe inundations—one in Tumlook and the other in Ghattal—which did much damage both to houses and crops. Notwithstanding all drawbacks, however, the outturn of the harvests was in every district favourable, the rice crop being everywhere above the average, and the cold-weather crops unusually good owing to the late date at which the rains ceased.

4. The public health of the division was on the whole good. The epidemic fever of Burdwan has, the Commissioner notes, entirely disappeared; and though there were here and there during the rains the usual outbreaks of malarious fever, it nowhere assumed an epidemic type. Cholera showed itself in all districts in a sporadic way, but became severe only in Cutwa in Burdwan, where special measures of relief were adopted with success. Small-pox is more prevalent in Beerbhoom than elsewhere owing to the prejudices entertained locally against vaccination. The district has now been brought within the metropolitan circle and will be systematically worked. It is satisfactory to find, from another part of the report, that the percentage of persons in Midnapore who are unprotected from small-pox has been found to be only from 10 to 20 per cent.

5. To the cultivators generally the year was one of remarkable prosperity. The full crops, attended with high prices owing to scarcity in Madras, enabled them to pay off most of their debts and to satisfy the demands of their landlords. In Burdwan the grain advances made during the famine of 1874, amounting to Rs. 2,35,000, have all been repaid save Rs. 10,000. Even in the tracts which suffered from inundation the ryots made such profits from mulberry as almost made up for any losses on rice.

6. Bankoora and Midnapore are the chief recruiting grounds in the division for coolies both for the tea districts and the colonies. The plentiful harvests of the year led to a considerable falling off in the numbers despatched during 1876-77—a feature common also to other districts, as the following figures will show:—

			1876-77.	1875-76.
Bankoora	1,140	2,457
Midnapore	1,292	1,885
Burdwan	2,876	4,672
Beerbhoom	834	1,109

Of the 2,876 coolies recruited in Burdwan, only 586 belonged to the district. Both the Magistrates of Bankoora and Midnapore report that the chief abuse in connection with emigration is the enticing away of women. Mr. Larminie would lay down more strict rules upon this subject, and would for the rest leave emigration free, believing that the true facts, in connection with the tea districts at any rate, are now thoroughly understood throughout that part of Bengal. The Lieutenant-Governor has recently impressed upon district officers the importance of dealing strictly with abuses connected with emigration. Proper supervision may be given without any undue interference with private enterprise, and contractors and employers must be made responsible for selecting respectable agents, and discountenancing illegality on the part of their servants.

7. The section of the report dealing with manufactures is defective, owing to the absence of all information from Hooghly, the principal manufacturing district. The Burdwan report, again, is couched in general terms, and does not give sufficiently precise information as to the mining and other industries of that district. The pottery works of Raneegunge are said to be "doing well," and the Bengal Iron Company's works are described as "flourishing." The coal trade

Manufactures and mines.

of Raneegunge has been "dull." Allusion is made to a discovery of lead and gold ore in Raneegunge, the lead ore being rich and in a thick seam, while the gold is not likely to repay the working. With reference to all these matters much more detailed information should have been given in the annual district report. The reports of the other districts, with the exception perhaps of Midnapore, seem to have been equally meagre. From the abstract given by the Commissioner of Mr. Harrison's report, it appears that the outturn of indigo in Midnapore was about 1,800 maunds, equal to the produce of an average year. The quantity of silk manufactured was 3,000 maunds, valued at 24 lakhs of rupees, from which excellent profits were derived. It is interesting to note that European twist is said to have supplanted home-made thread in the local manufacture of cloth, owing to its "producing the same quantity of cloth with one-third of the quantity of material, without any difference in price." The cloth manufacture is, however, said to be declining—a fact which is of serious moment to this division, in all districts of which large numbers of weavers ply their trade. The numbers as given in the statistical account of Bengal stood thus some years back—

Burdwan	24,559
Bankoora	6,685
Beerbhoom	7,531
Midnapore	26,276
Hooghly and Howrah	17,049

The Lieutenant-Governor would wish to have special inquiry made as to the present condition of the trade in all districts, and to have the subject more fully treated in next year's report.

8. The trade in rice throughout this division has during the year been enormous, owing to the high prices ruling in Calcutta. The canals carried from Midnapore 21½ lakhs of maunds of rice and paddy, against 6½ lakhs in the year preceding: and this notwithstanding the fact that sections of the high level canal were twice closed to traffic owing to accident. The railway failed entirely to take off the supplies brought into the stations along the line, and great quantities had eventually to be carted down the Grand Trunk Road. In one month Burdwan alone sent 2½ lakhs of maunds to Calcutta. The extent of the trade was something quite unexpected and unprecedented.

9. Throughout this division, where there are so many intelligent and educated native gentlemen, the ceremony of the 1st January 1877 evoked a very gratifying display of loyalty. In Midnapore, Mr. Harrison reports that the house tax under the Road Cess Act, the Village Chowkeedaree Act, the project of compulsory payment for irrigation, and some of the provisions of the Embankment Act, are all unpopular and give rise to some discontent. In Howrah the new Municipal Act is said to give dissatisfaction to certain classes. It is hardly possible in any country to make measures involving direct taxation popular; but such a measure as the Village Chowkeedaree Act ought, if judiciously worked and supervised, to lead to no discontent worth noticing.

10. There are but few newspapers actually published in the division, the educated natives generally subscribing to some one or other of the metropolitan papers. As Mr. Harrison remarks, "the notions imbibed by them are diffused among their neighbours," and "the press of the country is unquestionably hostile in tone" to the Government, mainly (Mr. Harrison thinks) because of the mere fact of its being in form an absolute Government.

11. The special statistical enquiries carried on in Beerbhoom under Deputy Collector Janokenath Mozumdar have now been completed, and the report is being revised by the Collector, Mr. Grant. In Midnapore special enquiries were made into the returns from irrigated and unirrigated lands respectively. The heavy rainfall of the year prevented the accrual of any marked benefit from the canal water. It was only to be expected that when there is a full rainfall ordinary lands would produce their ordinary crop, while irrigated lands can do no more. In the majority of the experiments, however, the figures are slightly in favour of the irrigated lands.

12. The conduct of the police throughout the year is as a rule favourably reported on. The Commissioner's remarks under this heading are very much to the point.

Police and crime.

Mr. Smith writes: "A police force is necessarily drawn from the people, and as the people are, so will the police be. Careful selection and training can only operate on the original material. Generally, however, the native of Bengal makes a very fair policeman. He has good detective ability, and, if not physically fitted for very active exertion, is patient and persevering: in the higher grades good pay, careful supervision, and the growing moral sense of the people rendering him from day to day more trustworthy; and if in the lower ranks, where pay is small and power great, honesty at times fails; the danger is one we are bound carefully to recognise and guard against to the best of our power." The spread of education is widening the field of selection, and more attention to departmental instruction would do much to improve men now in the force. The rural police is yearly improving, and the working of the Chowkeedaree Act of 1870 is doing much to better their status and secure that regularity of pay without which they cannot be expected to be honest.

13. The criminal returns show a decrease in the number of offences, cognizable and non-cognizable, throughout the division. The police were also fairly successful in dealing with heinous crime. In Burdwan there was an improvement in the results in cases of dacoity and cognizable crime generally. In Midnapore an unusual outbreak of dacoity in the beginning of 1876 was most successfully met, almost every case being detected and 119 dacoits convicted. Dacoity appeared to have been stamped out in Hooghly, but has again showed itself in the current year. On the whole, however, it is satisfactory to note that the steady increase of crime apparent on the returns of the last few years has received a check—a fact that may perhaps be taken to indicate reviving prosperity among the lower orders as well as better working on the part of the police.

14. There is a very general complaint of the delays in the civil courts in the disposal of rent suits. The ryots find themselves harassed by the procedure of the court, while the zemindars complain that they cannot recover their rents. This matter is under the consideration of Government.

Civil justice.

15. The total collections of land revenue were 98·3 per cent. of the demand (an improvement on the year preceding), and would have been much better but for the short realizations in the temporarily settled and Government estates of this division which have been recently under settlement. Of 420 estates in arrear, only 35 whole estates and three shares were brought to sale, and the prices realized were from five to six times the Government revenue. The causes of default were chiefly a desire to sell the estates to advantage, or to get rid of unprofitable properties, and disputes among shareholders.

Land revenue.

The field operations of the Revenue Survey in Midnapore and Hooghly are completed, but there is, the Lieutenant-Governor understands, a great deal still to do in the preparation of the registers. The Officiating Commissioner has been requested to inspect carefully the survey office, and see what can be done to push on this part of the work.

16. The excise revenue of the division was Rs. 6,10,460, an increase of 8·9 per cent. on the receipts of 1875-76. In most districts, however, illicit distillation is reported to go on, and the sudder distillery system has failed to meet the requirements of the outlying thanas. This is a matter now under the special consideration of the Board. There can be no doubt that a very considerable increase of revenue from excise may fairly be expected throughout Bengal, and that any increase in consumption attendant upon this will represent simply the substitution of licit for illicit spirit.

Excise and other revenue laws.

17. The stamp revenue showed a decrease of 8·7 per cent. as compared with the previous year. The decrease was common to all the districts except Burdwan and Hooghly. The Commissioner attributes the falling off to the prosperity of the people, followed by a "decline in those branches of legal business which arise from poverty." The Lieutenant-Governor fears, however, that much revenue is lost by the neglect of the civil courts to pay adequate atten-

tion to the correctness of the stamps on documents filed. This is a growing evil which legislation will shortly attempt to correct.

18. In Burdwan serious frauds on the salt revenue were discovered and punished. Refuse salt obtained in the process of making saltpetre was smuggled up from Calcutta under the name of hide salt free of duty, and then mixed with duty-paid salt or purified and sold as duty-paid salt. The Board of Revenue should see that similar frauds are made impossible for the future.

19. Thefts of spikes from the railway continue to be very frequent in Burdwan. The Magistrate believes that these offences are generally committed by permanent-way coolies, and this impression is confirmed in the experience of other divisions. Such thefts have been put a stop to in some places by the railway authorities steadily fining the gangs of coolies double the value of all spikes or other material missing.

20. The bursting of the Lukhimpore lock on the Midnapore high level canal did much injury to the canal traffic at a time when it was most brisk. The area in Midnapore under irrigation leases fell from 70,000 acres in 1874-75 to 30,000 in 1876-77, there being no pressing demand for water owing to the heavy rainfall of the year. Mr. Harrison remarks that, had compulsory irrigation been introduced after the drought of 1873, it would have been accepted almost without a murmur. Now, however, he adds, the case is different. The Danconi drainage scheme in Hooghly is said to have done immense benefit to the country, and the operation of apportioning the cost (Rs. 4,84,127) among the proprietors of the lands reclaimed is now going on. The Rajapore and Amptah schemes are at present in abeyance, and no progress has been made with the Jugutee and Kananuddee canal—a project of which the Collector of Burdwan expresses an unfavourable opinion.

21. The road cess committees have on the whole worked well. They have had generally ample funds at their disposal, and have employed them profitably and judiciously. In Midnapore the improvement in communications is marked and steady. In Burdwan there are complaints that enough money is not spent on village roads. The committee here does not levy the maximum amount of cess, and it has therefore the remedy in its own hands. In Beerbhoom, Bankoora, and the north of Hooghly the communications are now in fair order. But in the south of Hooghly (Howrah) much work has still to be undertaken. The Lieutenant-Governor will be glad to learn that the other committees have followed the example of Hooghly and Burdwan and done away with all toll-bars on district roads.

22. The education committees in this division take much interest in their duties. Under Mr. Harrison's able guidance the Midnapore returns of primary education again show remarkable progress, the schools having increased by 468, and the pupils by 10,439, over the figures of 1875-76. There are now 3,804 pathsalas and 93,119 pupils in the division, against 2,565 schools and 64,950 pupils in the previous year. The Lieutenant-Governor regrets, however, to observe that the girls' schools in the division are less by 29 and the pupils fewer by 154 than in 1875-76. This is a discouraging result in one of the most advanced divisions of Bengal.

23. There are six first class and sixteen second class municipalities in the division. The elective system has been tried in Serampore and in Burdwan. In the latter town the Commissioners elected were of the same class as those formerly in office. In Serampore there has been a great deal of friction owing to the existence of two parties in the town. With few exceptions, these committees also have done their work fairly and intelligently.

24. The only report containing any information of moment relating to the post-office is that of Midnapore, where it is noted that the number of letters passing through the district office has grown from 99,878 in 1875-76 to 698,880 in 1876-77.

25. The relations between landlord and tenant are described as amicable, except in the district of Midnapore, where the pressure of the rent-question has made itself generally felt. The Maharanee of Burdwan is mentioned with special

commendation as the best proprietor in Midnapore. She has prohibited, for instance, the levy of abwabs of every kind in the Soojamoota estate belonging to her. The proprietors of the Mysadul estate and the Roy Baboos of Jara are also said to stand well with their ryots. In Bankoora Baboo Radha Bullubh Singh of Kuchenkole, Baboo Damoodhur Singh of Maliarah, the Banerjees of Ajoodhya, and the Messrs. Gisborne are well spoken of. In Beerbhoom, Rajah Ramrunjun Chuckerbutty of Hetumpore is specially mentioned.

26. The remarks of the Commissioner upon the officers under him will be communicated to the Appointment Department of this office.

Character of officers.

By order of the Lieutenant-Governor of Bengal,

A. MACKENZIE,

Secretary to the Govt. of Bengal.

RESOLUTION ON THE BOARD'S REPORT ON THE LAND REVENUE ADMINISTRATION OF THE LOWER PROVINCES FOR THE YEAR 1876-77.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 27th November 1877.

READ—

The Board's Report on the Land Revenue Administration of the Lower Provinces for the year 1876-77.

THE report submitted by the Board is a careful and comprehensive record of the working of this department of the administration, and the results are in general satisfactory. The prosperity of the year was marred by one great calamity, the cyclone which ravaged the south-eastern districts of Bengal on the 31st October 1876. This necessitated suspensions of land revenue to a considerable amount, and also put a stop for the time to settlement operations in the localities affected. In other respects the year has been marked by no very striking incidents. An important measure for the registration of the names and interests of landed proprietors became law during the year; but the results of it were hardly felt within the period embraced by the present report. Except in the districts devastated by the storm-wave, a good harvest was realized, and the cultivators reaped a large profit from the high price of cereals which prevailed during the latter months of the year.

2. The total number of estates on the revenue-roll during 1876-77, as compared with the preceding year, is shown in the following table:—

Class of estates.	1875-76.	1876-77.
Permanently-settled estates	140,704	132,570
Temporarily ditto	8,286	7,500
Government estates	2,514	2,432
Ryotwaree tracts	44	27
Total	151,552	142,529

The large decrease under class I arises from the transfer of about 10,000 holdings in Calcutta, which were previously shown as separate estates under permanent settlement, to class III, as a single Government estate. The decrease under class II is in the Rajshahye Division, and is due to the revised classification of a number of holdings in Darjeeling, which are now treated as subordinate tenures instead of distinct estates. The decrease in class IV is the result of the transfer of 21 estates in Noakholly, held for the most part under farming settlements, to class III of the table.

3. The current land revenue demand for the year, including malikana, revenue of police lands, and quit-rents of tributary mehals, amounted to Rs. 3,67,27,341, against a demand of Rs. 3,45,55,929 in 1875-76. This increase,

however, was almost entirely nominal, being due to the inclusion in the demand of 1876-77 of sums excluded last year on account of their not being realizable by law within the year. Irrespective of this nominal increase, the actual increase amounted to Rs. 1,15,070, arising from re-settlements, escheats, and resumptions. The arrear demand was Rs. 17,87,823, or considerably less than half of that of last year, which was Rs. 40,52,840. The total demand of the year thus amounted to Rs. 3,85,15,164.

4. The collections of the current demand were Rs. 3,51,21,042, or 95·35 per cent., and the arrear collections amounted to Rs. 13,98,711, or 78·23 per cent. of the demand. Taking current and arrear collections together, they amounted to Rs. 3,65,19,753, or 94·81 per cent. of the total demand. The current collections were thus larger than those of the preceding year, but, owing to the larger demand, the percentage shows a decrease. In the arrear collections there is a falling off, both in the amount realized and in the percentage. In 1875-76 the total collections were 95·58 of the demand, and in 1874-75 they were 92·36 per cent.

5. The remissions granted during the year amounted to Rs. 76,117, four-fifths of the whole sum being remissions of revenue in estates belonging to Government. The classification of these remissions gives the following results :—

	Rs.
Nominal remissions	48,818
Remissions of right	18,236
Remissions of grace	9,063

Remissions of the first two classes were allowed on account of diluvion of lands and re-settlements at reduced rates. Remissions of grace were largest in the district of Pooree, where they were granted on account of the loss of crops by inundation.

6. The unrealized balances of the year amounted to Rs. 19,19,294, being 4·98 per cent. of the total demand, and exceeding the balances of the preceding year by Rs. 3,54,049. A considerable portion of this balance has since been realized, and only about Rs. 80,000 are likely to prove eventually irrecoverable. The percentage of balances on demand under each class of estates is shown in the margin, and explanatory details of the balances in each district are given in the Board's report.

Class I	...	2·80
Class II	...	9·73
Class III	...	28·71
Class IV	...	17·12

Briefly, it may be said that almost all the balances under class I are either on estates under the charge of the Court of Wards, or on estates which have been advertised for sale for arrears; while most of the arrears under class II either accrued from suspensions granted on account of the cyclone, or were due from estates of which the settlements are not yet finally completed.

7. The estates in class III are partly farmed and partly held under direct management, while those in class IV are all under direct management. In the Resolution on last year's report an opinion was expressed that the realizations of revenue in Government estates might reasonably be expected to amount to 90 per cent. of the demand. It appears, however, that this standard was reached in only nine districts, the best results being attained in the Orissa Division. In nine districts the collections fell below 50 per cent., and in two of these (Noakholly and Mozufferpore) they amounted only to 21 and 20 per cent. respectively of the demand.

8. The Lieutenant-Governor is unable to accept the explanations given in the report as affording any sufficient excuse for this unsatisfactory result. It is a general plea of district officers that the realization of arrears by the certificate procedure under Act VII (B.C.) of 1868 is a cumbrous and dilatory process, and that successful khas management depends upon the exertions of subordinate agents, who are not always competent or energetic. But Mr. Eden is compelled to remark that the certificate process is at all events a more speedy and effective procedure than any which the law has put into the hands of ordinary proprietors, and that the punctual collection of rents under a system of direct management is one of the surest tests of that administrative ability which may be fairly looked for in a district officer. In all Government estates, whether farmed or held khas, the rents are fixed at moderate amounts, and the ryots are protected from all exactions in excess of the fixed assessment; and under these conditions

the Lieutenant-Governor thinks that better results ought to be achieved than were attained in the great majority of districts during the year under review. The successful management in some few districts, in Cuttack and Balasore, in Julpigoree and Darjeeling, shows that the Government is not unreasonable in demanding a much higher general standard. If the Collector of Gya can realize 93·4 per cent. of the demand on Government estates in his district, there is no tangible reason why the percentage in Monghyr should be only 30·2. The contrast between Bogra, with 87·2 per cent. of collections, and the adjacent district of Pubna, with only 38·6 per cent., is not sufficiently explained by the statement quoted in the report that the balance in Pubna "could not be realized for unavoidable reasons." The instance of the Tooshkhalli estate in Backergunge appears to show that the alleged difficulties of direct management can be overcome by firm and judicious administration. This estate has recently been taken under direct charge; it has just been re-settled at an enhanced rental, and the ryots are well known as an excitable and somewhat turbulent body of men. Nevertheless the entire demand of the estate was realized—a result which reflects much credit on the officer in charge of the collections.

9. Including ryotwaree tracts, and estates belonging to private persons, there were altogether 8,241 estates under the direct management of the officers of Government during the year. The charges of management were moderate, amounting only to 6·3 per cent. on the collections. Of the estates not belonging to Government, the most important was the large estate of Majnamoota in Midnapore, which was taken in charge in consequence of the default of the proprietors to pay the land revenue. A special report on the management of this estate has lately been submitted by the Board, and separate orders have been recorded upon it. The management has presented unusual difficulties; but fair progress has been made with the collection of the arrears which were due when the property was taken in charge, and the apparent deficiency in the amount of current collections is explained by the fact that about one-fourth of the nominal demand is not actually due within the official year, the accounts of the estate being made up according to the Umlee year.

10. The sales of Government estates during the year consisted only of some petty holdings in Calcutta, and of a few plots of railway lands which were no longer required. Detailed proposals, however, were made in the course of the year to the Government of India for the sale of a considerable number of estates, which, from their position or their size, do not admit of being profitably retained under Government management. Since the close of the year sanction to the sale of these estates has been received.

11. The total number of settlements effected during the year was 845, of which 67 were original settlements, 340 were re-settlements, and 438 were summary settlements. The net increase of Government revenue amounted to Rs. 68,321. The most important settlement work was in the districts of Chittagong, Pooree, Midnapore, and Backergunge. In Chittagong 46 original settlements were concluded, and fair progress was made with the re-settlement of the noabad talooks. In Pooree the work consisted of the re-settlement of the important estate of Khoordah. It will take two seasons more to complete this settlement, but a large increase in the present Government revenue may be expected. In Midnapore the Settlement Officer has been employed in the assessment of the two large estates of Jellamoota and Majnamoota, which are temporarily-settled estates not the property of Government. These two settlements have been completed since the close of the year, but the ryots have not accepted the enhanced rates, and the final confirmation of the settlements is still under consideration. In Backergunge a re-settlement of the valuable estate of Tooshkali at a largely enhanced rental was successfully carried out by the Soonderbuns Commissioner, Mr. Gomess. In Lohardugga the settlement of the large confiscated estate of Burkagurh was taken in hand, but the progress made was slow, and the survey of the estate has since been transferred to a professional party.

12. On the whole, the Lieutenant-Governor thinks that the settlement operations of the year have been fairly successful, and have resulted in a substantial increase of revenue without pressing inequitably upon any class of cultivators or proprietors. In Chittagong it appears that much of the land now

that the disputants are unwilling to submit their differences to the decision of the law. This would appear to be the case in the Dacca Division. In Behar, where the power of the landlords has practically been almost unlimited, it is reported that the ryots are showing a readiness to assert their rights and to resist illegal claims. It may be hoped that the recent orders for the reorganization of the putwari system in Behar will have a beneficial effect by the establishment of a trustworthy record of village accounts. Detailed rules on the subject have been lately framed by the Board, and are now under the consideration of Government.

23. On the whole, the result of the information which the Lieutenant-Governor has acquired in his visits to various parts of the Lower Provinces is that there has been little open display of animosity during the year between landlord and tenants, and it has not been necessary in any case to have recourse to the special procedure of the Agrarian Disputes Act. In some districts certainly there is every indication that the landlords and tenants who have been disputing for years are now coming to terms and making mutual concessions. The causes of dispute, however, have not been removed, and the real grievance is that the state of the law is such as practically to involve a denial of justice to either party who may attempt to put the law in motion. The zemindar who applies to the courts to obtain an enhancement of rents, or the recovery of arrears due to him—the ryot who complains of excessive demands, or of illegal distraint—finds himself hampered and eventually baffled by the technical and dilatory procedure which regulates the disposal of these classes of suits. So long as this is the case, it is to be apprehended that the differences will smoulder without being extinguished; that both parties will ordinarily remain quiescent, but that the latent animosity will from time to time break out in acts of violence and outrage. Such, in fact, has been the experience of the past year, two aggravated cases of the murder of zemindars by ryots having occurred—one in Furreedpore and the other in Midnapore. This evil can only be effectually remedied by an amendment of the law; and with this object the Lieutenant-Governor is desirous of introducing a measure to facilitate the realization of rents by a more speedy and summary procedure than now exists.

24. In the districts in which rent suits are still heard by Collectors (comprising the Orissa and Chota Nagpore Divisions and the districts of Darjeeling and Julpigoree) there was a small increase in the number of cases instituted. A special rent law for the Chota Nagpore Division will shortly be laid before the legislature.

25. The duty of inspecting Collectors' Offices is reported to have been regularly performed during the year, except in the districts of Chittagong and Purneah. But the Lieutenant-Governor observes that some explanation appears to be required of the very large increase in the number of pending cases on the files of the Collectors, as shown in Table No. XIX appended to the report. The cases remaining over from the previous year were 32,070—a number rather above the average of former years. The cases instituted during the year were greatly in excess of the average, and there was only a small increase in the number of cases disposed of, the result being that no less than 111,144 cases remained pending at the close of the year. It would seem that these heavy arrears, which occur in every division except Chota Nagpore, should have attracted the attention of Commissioners during their tours of inspection. In the Commissioners' offices the disposal of work was satisfactory, and the number of pending cases is comparatively small.

26. The transactions in sub-divisional treasuries showed a decrease both in receipts and disbursements as compared with the previous year, the figures being as follow:—

		1875-76.	1876-77.
		Rs.	Rs.
Receipts	1,51,27,827	1,30,89,157
Payments	1,17,94,137	1,16,18,939

As an addition was made to the number of sub-divisional treasuries during the year, and the working of the system is reported to have been satisfactory, it is not clear to what cause this falling off in the transactions is to be attributed, and no explanation on the subject is offered in the report. The decrease shown last year, as compared with the returns of 1874-75, was attributable to a normal

reaction following the extraordinary receipts and disbursements during the period of scarcity; but this explanation does not account for the continued falling off during the year under review, the transactions of the year having been considerably below those of 1872-73. The Lieutenant-Governor would ask the Board to institute an inquiry into the matter.

27. The state of the records appears to require attention, as there are already several complaints of want of room, and additional accommodation will be required for the putwari papers which are now being filed in Orissa and Behar. The subject should have the careful consideration of the Board.

28. The Lieutenant-Governor observes with satisfaction the large number of officers noticed in the report as having deserved commendation for the efficient discharge of their duties.

By order of the Lieutenant-Governor of Bengal,

H. J. REYNOLDS,

Secretary to the Government of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE
MUNICIPALITY OF THE SUBURBS OF CALCUTTA
FOR 1876-77.

MUNICIPAL.

Calcutta, the 23rd November 1877.

READ—

Letter No. 61MM, dated the 26th August last, from the Commissioner of the Presidency Division, submitting the Administration Report of the Municipality of the Suburbs of Calcutta for 1876-77.

Read also—

The Administration Report of the Municipality of the Suburbs of Calcutta for 1875-76, and the orders passed thereon.

THE gross income of the municipality during the year was Rs. 4,28,054, or Rs. 4,546 less than the estimate, and Rs. 6,342 less than the total receipts of the previous year. The collections of the house-rate were satisfactory, and the unrealized balance on account of the year was only Rs. 1,655 out of a total demand of Rs. 2,43,000. The assessment operations of the year resulted in an increase of Rs. 2,802 a quarter, which more than compensates for the loss of revenue from desertions and deteriorations in value during the previous year. The average rate levied in the area taken up by the assessor was Rs. 24 on each bricked house, Rs. 2-5 on each thatched house, and Rs. 4 on each garden. It is explained that many of the thatched houses in the area in question are used as store-houses and for other trading purposes. The fines realized by the establishment of the Magistrate of the district should be regularly paid in to the credit of the municipality. The collections on account of house-scavengering fell short of the estimate by Rs. 13,413. The difficulties in the way of extending the system under the present law thus appear to have been underrated. The advance account showed a balance outstanding of Rs. 597 only at the close of the year. The expenditure of the year amounted to Rs. 4,32,054, against an estimate of Rs. 4,82,600. A saving is shown under nearly every head. The sum of Rs. 10,443 entered as savings on account of police was disbursed after the close of the year. The Commissioner has rightly called upon the Chairman to report under what system contracts are given and stores purchased. Tenders should invariably be invited, and the grant of contracts should be made only with the approval of the Commissioners.

2. The question of the improvement of the water-supply in the suburbs has been carefully considered by the Commissioners during the year. Various projects for the construction of new, or the improvement of existing, tanks were discussed at different times, though, owing to the financial considerations involved, no particular plan was definitely adopted. While the question was in this stage, a communication was received from the Chairman of the Municipal Commissioners for Calcutta, inquiring if the Commissioners for the

brought under settlement had previously escaped assessment altogether. The Lieutenant-Governor entirely agrees with the Board in thinking that settlers, who may have laid out money upon these lands without possessing any valid title to them, should be dealt with in a liberal and conciliatory spirit. The unsatisfactory state of the law, as recently interpreted by the courts, regarding the power of a settlement officer to determine rates of rent, is noticed in the report, and has been the subject of separate correspondence. In the Lieutenant-Governor's opinion, the powers of a settlement officer to enhance rents should be just the same as the powers conferred on a proprietor under the ordinary rent law. In other words, he should not enhance except upon grounds upon which the law would allow a landlord to enhance. But rates of rent which have been fixed by a settlement officer on these principles, and approved by the superior revenue authorities, should be presumed by the civil court to be correct, until the contrary is shown in a regular suit. The Government of India have lately sanctioned the introduction of a legislative measure embodying these principles.

13. The paragraphs of the report which refer to the subjects of irrigation, drainage, and embankments will be considered by the Lieutenant-Governor in the Irrigation Branch of the Public Works Department.

14. The subordinate establishments of Sub-Deputy Collectors and Canoon-goes are reported to have worked well during the year, and they were found especially useful in assisting the operations connected with the introduction of the new Land Registration Act. This measure became law in August 1876, and all proprietors were required to register their names and interests within six months from the 1st November following. The number of mutation cases was consequently much larger than usual, 5,044 cases having been decided under the old Regulation VIII of 1800, and 7,618 cases under the new Act. The effects of this measure have as yet been only very partially realized; but it is confidently hoped that the maintenance of a complete and authoritative register of all lands, with the names and shares of the actual possessors, will be a great convenience both to the Government, to the landed proprietors, and to all classes of subordinates holders and ryots.

15. The statements of proceedings under the sale laws show that, of 4,825 estates and shares which became liable to sale under Act XI of 1859, only 496, or little more than one-tenth of the whole, were actually sold, the remainder having been exempted from sale on payment of the arrears due. The only district in which sales were numerous was Chittagong, in which 1,225 estates became liable to sale, and 286 were sold. This is attributed in the report to the difficulties and losses caused both to proprietors and tenants by the cyclone. But the Lieutenant-Governor observes that the number of estates sold for arrears of revenue in Chittagong amounted to 259 in 1875-76, to 277 in 1874-75, and to 318 in 1873-74; and while he fully recognizes the difficulty of making punctual collections from a large number of petty estates, he cannot but think it unfortunate that the sales for arrears in a single district should year after year be as numerous as those in all other districts together, and he would ask the Board to consider whether some remedy cannot be applied. The interests of the revenue require that the sale law should be stringent and comprehensive, but a Collector should use a discretion in refraining from putting this machinery in motion for the recovery of arrears amounting to perhaps a few annas.

16. The sales in other districts call for no special remark, and the law appears to have been administered with leniency and consideration. The revenue demand of the estates sold was Rs. 70,548, and the purchase-money realized was Rs. 6,81,216, or an average of a little more than nine times the Government revenue. The number of estates purchased on behalf of Government was 59, with a revenue demand of Rs. 1,348. Appeals against sales were preferred in 19 cases, and in seven of these the sales were annulled. In 11 other cases the Board recommended the annulment of sales under section 26, Act XI of 1859, on the ground of hardship to the proprietors.

17. The total number of partition cases disposed of during the year was 638, against 366 in the previous year; while there was also a decrease in the number of cases instituted, so that the files of pending cases have been considerably reduced, though they still represent about two years' work. The great majority

of the partition cases occurred in Behar, and five-sixths of the whole number disposed of belonged to the Patna Division. The new Partition Act (VIII B.C. of 1876) did not become law till September 1876, and its working has not yet been tested by experience. It is stated that at present it has had the effect of diminishing the number of cases instituted, as applicants for partition are now required to be recorded proprietors. But this result will, of course, be only temporary.

18. There is no doubt that in Behar generally, and especially in the districts of Mozufferpore and Durbhunga, the sub-division of property by means of the partition law is proceeding at a very rapid rate. The number of estates on the revenue roll in these two districts has trebled within the last 25 years, and in Mozufferpore alone no less than 1,531 additional estates have been formed by butwara during the last two years. In the opinion of the Collector this minute sub-division of property arises in a great measure out of disputes between shareholders connected with the practice of leasing indigo lands under the ticcadaree system; but whether this opinion is correct or not, the Lieutenant-Governor agrees with the Board in thinking that the matter is one in which it is not desirable that the Government should attempt to control the wishes and tendencies of the people. It may be added that the difference in this respect between Behar and other parts of the Lower Provinces is perhaps more apparent than real. In the Burdwan Division there was not a single partition case during the year; but it cannot on that account be supposed that no sub-division of landed property occurred. A system of subinfeudation, no less than a system of partition, has the effect of breaking up estates, and the social and economic results of the one system do not greatly differ from those of the other. It is true that the effects of the partition system are more prominently brought to the notice of a Collector, because the revenue of each of the partitioned estates has to be separately apportioned and realized, and difficulties might arise if this were carried to an extreme. But the law has provided against this by declaring that no separate estate shall be formed with a Government demand of less than one rupee, unless the land revenue is redeemed.

19. The redemptions of land revenue extended to 74 petty estates and holdings in Calcutta, the Suburbs, and Chittagong. The total amount of revenue redeemed was Rs. 137, and redemption was permitted at an uniform rate of 25 years' purchase. The number of redemptions exceeds that of the three previous years; but the average revenue of each holding has diminished. In two cases Government lands were alienated for public purposes without payment, one of these plots being for the site of a Magdalen Home in Calcutta, and the other for a Mahomedan cemetery in the district of Moorshedabad.

20. The total area of lands acquired for public purposes during the year was 6,255 acres, for which compensation was paid to the amount of Rs. 15,18,747, besides abatements of revenue amounting to Rs. 133. Some of the lands required for relief roads and tanks were given free of cost by the owners. The compensation paid for 14 acres 13 poles of land required by the Port Trust for roads, wharves, and tramways amounted to more than two-thirds of the whole sum expended, and the high value of land in Calcutta is strikingly illustrated by the fact that these lands cost on an average more than Rs. 70,000 an acre. About three lakhs of rupees were paid for lands taken up by the Irrigation Department, principally in the district of Midnapore.

21. There were no sales of waste lands during the year, but there was an increased demand in the Dooars for leases both of tea lands and of lands intended to be brought under ordinary cultivation.

22. An increase or decrease in the number of notices of enhancement of rent or relinquishment of lands issued during the year is considered to afford some test of the relations which exist between zemindars and their ryots. In 1876-77, as compared with the previous year, the notices of enhancement decreased from 8,710 to 8,216, while relinquishment notices increased from 8,073 to 9,051. But it is evident that these figures supply no real gauge of the general condition of the question. The total number of notices is so small that the action of a single zemindar may materially affect the result; and it must also be remembered that the diminished number of notices may be a sign, not that the disputes between the parties have been arranged, but merely

suburbs would desire to have the Calcutta water system extended to any part of the suburbs. This proposal has been favourably received, and the Commissioners are in correspondence with Mr. Metcalfe with the view of settling the preliminaries of the scheme. Mr. Eden will be glad to render the Commissioners every assistance should they desire to raise the necessary funds by municipal taxation. The assessment on house property in the suburbs, as the Commissioner remarks, amounts only to $7\frac{1}{2}$ per cent., against an assessment of more than 15 per cent. in Calcutta.

3. The Commissioners have directed their attention to the improvement of the clusters of huts known as bustees, selecting for the first experiment the Gossain bustee immediately to the south of the Cathedral. The condition of this block, as described in the report of Drs. Chandra and French, is such as to call urgently for the interference of the Commissioners. Definite recommendations for its improvement have been made, and the owners have been called upon to give effect to them within a specified period. There are many difficulties in the way of a complete measure of reform in respect of these bustees, but the Lieutenant-Governor trusts that, with the exercise of conciliation and public spirit on both sides, the Commissioners and the proprietors will arrive at a satisfactory conclusion on a subject which is intimately connected with the general health of the suburbs. It appears from a separate report which has been received on this subject that five bustees have during the past two years been taken up for public purposes and cleared. Where this is possible, it appears to be by far the most satisfactory solution of the difficulty; and if the lands when cleared and improved are let on building leases for the erection of houses on plans approved by the Commissioner, it should be possible to carry out a steady improvement in the suburbs at a very small cost.

4. The most important point connected with the conservancy operations of the year was the gradual extension of the system of house-scavengering. The Commissioners have under the law no power of enforcing payment for work done by the municipal mehters. Fees are demanded in advance, and if they are not paid, the municipality refuse to send their mehters. Then if, as usually happens, private scavengering is omitted, the Commissioners threaten a prosecution for the privies being kept in a filthy state. In the face of these difficulties, Mr. Eden considers it very creditable that so many as 15,100 out of 40,000 houses have been brought under the system. It has been separately reported that of the remainder many are situated in thinly-peopled rural quarters to which the system is inapplicable. It appears, however, that these operations should be assisted by the direct action of the law, and the point will be borne in mind when the Act comes to be revised. There appears to be some difficulty regarding the disposal of the night-soil, and Mr. Mangles' suggestion that it should be utilized on sewage, farms, or gardens, to be taken up by the municipality, is worthy of attention. This course has been followed with advantage by more than one municipality in the Upper Provinces.

5. The registration of births was not conducted with success, the result being an average-birth-rate of 15·27 only per mille. The average mortality among the different races was 51·46 per mille, or 50·12 for males and 53·36 for females. The death-rate ranged from 68·47 among Christians and 55·16 among Hindoos to 45·36 among Mahomedans and 17·54 among other races. In Calcutta the mortality among the different classes of natives is 31·3 for Hindoos and 28 for Mahomedans. These figures are quite in keeping with the respective characters of the native populations, that of Calcutta being generally migratory, while that of the suburbs is comparatively fixed. The various points in connection with the health of the suburbs have been dealt with in the Sanitary Commissioner's report.

6. Of the non-official Commissioners, Rai Jadub Chunder Ghose, Bahadoor, Syud Gholam Ali, Baboos Jagudanund Mookerjee and Umbica Churn Roy, and Mr. James Blackburn were most regular in their attendance at the deliberations of the Municipality.

By order of the Lieutenant-Governor of Bengal,

HORACE A. COCKERELL,

Offg. Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 24th November 1877.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Nov. 24 '77	Nil	No rain. Reaping of <i>amun</i> and sowing of <i>rubbee</i> are going on. No change in the prospects on the whole since last report.
	2 Bankoora, " 24 "	Nil	Weather—clear and cool. <i>Amun</i> is fast ripening. No change in the prospects of the winter crop.
	3 Beerbhoom, " 24 "	Nil	Weather—rather warm for this time of the year. No change to report in the state and prospects of the crops.
	4 Midnapore, " 24 "	Nil	Weather—rather warm, otherwise seasonable. State and prospects of the crops are fair.
	5 Hooghly, " 24 "	Nil	Weather—seasonable. Harvesting of late rice has commenced. Sugarcane is being cut. <i>Rubbee</i> sowings are going on. Vegetables are doing well. Fever is very prevalent.
	Howrah, " 26 "	Nil	Weather—too hot to be seasonable. Rice harvest is commencing on the high lands. Taking high lands and low lands together the crop is quite up to the average in the south of the district. The northern part of the Sudder sub-division is worst off, but even there the low land crop is good.
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Fergunnahs, Nov. 24 '77	Nil	Weather—rather warm for the time of year. State and prospects of the crops are satisfactory. The winter harvest has begun. Fever is prevalent in Busscherhat sub-division, and sporadic cases of cholera are reported from all parts of the district.
	7 Nuddea, " 24 "	Nil	Weather—warm in the day, but heavy dews at night. No rain. The <i>amun</i> crop is said to be satisfactory in all the sub-divisions except Koochta, where the outturn is poor. The winter crops promise well. Fever is bad in Koochta and Bongong, and cholera is prevalent in many parts of the district.
	8 Jessore, " 24 "	Nil	Weather—seasonable. Crops on the whole promise well. The outturn on the high lands will probably be rather short owing to insufficient rain. Fever is very prevalent throughout the district. Cholera is increasing.
	9 Moorsshedabad, " 24 "	Nil	Temperature unseasonably warm. Prospects of crops continue to be as good as reported last week. Harvesting of <i>amun</i> is in fair progress. Prices of rice are almost steady. Cholera and fever are still prevalent in Berhampore, Jungypore and Lalbagh sub-divisions. In Rampore H&A public health is good.
RAJSHAHY AND COCHIN BENGAL DIV.	10 Dinagepore, " 23 "	Nil	Rather unseasonably warm, as if bad weather was coming. State and prospect of the crops are very good. Reaping of rice crop has commenced. Ten deaths from cholera reported, principally in the south, during the week.
	11 Rajshahye, " 24 "	Nil	Weather—clear. Days rather hot, but nights cold with heavy dew. In places where the winter rice crop has ripened it is being cut. <i>Rubbee</i> crops are flourishing, but a little rain would improve them. There have been several cases of cholera in different parts of the district, and fever is still prevalent.
	12 Rungpore, " 23 "	Nil	Weather—dry, with a westerly wind in the afternoons. State and prospects of all kinds of crops continue to be most satisfactory. Mustard is being sown, and nearly all the tobacco has now been transplanted. Fever of the intermittent type is more prevalent than during last week. Cholera has broken out in Gobindgunge, but is diminishing in Bhowanigunge.
	13 Bogra, " 24 "	Nil	Weather—dry and clear, and warm for the time of year. Reaping of <i>amun</i> has begun, and there is every probability of a bumper harvest. Minor crops are looking well. Cholera is on the increase, chiefly in the western part of the district; 859 deaths have occurred since the outbreak of this disease. Fever too is prevalent.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—(Continued.)			
Central Districts.			
RAJSHAHIE AND COOCH BEHAR DIV.	14 Patna, Nov. 24 '77	Nil	Weather—fine, cool, and seasonable. Reaping of <i>amun</i> has commenced, and consequently no more rain is now required. State and prospects of winter crops appear to be good. Fever is still prevalent in the town, and cholera has appeared in many places in the mofussil.
	15 Darjeeling, „ 23 „	Nil	Alternate sunshine and bazy weather, with signs of rain. Heavy dew at night. The early <i>haimanti</i> rice is being reaped in some places. All the crops promise a very fair outturn.
	16 Julpigoree, „ 24 „	Nil	Weather—somewhat too hot to be seasonable. Prospects of the winter rice are good. Transplantation of tobacco in some places is nearly complete, and in others has just commenced. Mustard and potato sowings are over. Land is being prepared for barley and wheat. Sugarcane promises well. Public health is not yet good. Fever is still prevalent in the town of Julpigoree.
	Cooch Behar, „ 22 „	Nil	Weather—fair and moderately cool. Prospects of the crops are not bad. <i>Amun</i> rice is in ear and promises an average outturn. Fever is prevalent in the Sudder and Mekligunge sub-divisions, but the health of the district is generally good.
Eastern Districts.			
Dacca Div.	17 Dacca, Nov. 24 '77	Nil	Weather—very warm for the season, but not unfavourable for crops. State and prospects of the crops are favourable. Cholera and fever are bad in Manickgunge sub-division and cholera in part of Sudder.
	18 Furreedpore, „ 24 „	Nil	Weather—clear, and cooler than during the previous week. Prospects of the crops continue the same as before. The early kinds of <i>amun</i> are being out. Moderate rain is required for the preparation of lands for the spring crops. Fever is prevalent, especially at head-quarters and Goalundo. There have been numerous cases of cholera at Furreedpore, but not in an epidemic form; it seems to be now disappearing.
	19 Backergunge, „ 22 „	Nil	Weather—seasonable. In consequence of continued drought the crops on the high lands have to a certain extent been injured, but the general outturn is expected to be fair. The new rice is coming into market in small quantities. Cholera and fever have made their appearance in the police-stations of Nalchitti, Backergunge, Gournadi, Mendigunge, Shoroopkati, and Motbaria, and a few deaths are reported therefrom.
	20 Mymensingh, „ 23 „	Nil	Weather—settled, but warm for the time of year. Prospects of the crops are excellent, but prices continue extraordinarily high.
CHITTAGONG DIV.	21 Tipperah, „ 23 „	Nil	Weather—fine, but rather warm for the time of year. Prospects of all crops are good.
	22 Chittagong, „ 22 „	Nil	Weather—fine and seasonable. State and prospects of the crops are very good.
	23 Noakholly, „ 22 „	Nil	Weather—warm for the season. Reaping of early <i>amun</i> has begun on the churs and high lands. Prospects are fair. Much land was left uncultivated in Hatia. Public health is not so good as when last reported. Fever and cholera cases occur.
	24 Chittagong Hill Tracts, „ 20 „	Nil	Weather—cool and foggy in the morning up to 8 A.M. The plough cultivators' paddy crop is now being harvested; a very poor outturn is anticipated in places where the crop was damaged by the floods in September last. Mustard is being sown here and there. The gathering of cotton still continues. The <i>ex-officio</i> Assistant Commissioner of Cox's Bazar reports that "crops are healthy and promise a good outturn."
BEHAR.	Hill Tipperah, „ 21 „	Nil	Weather—still warm in the daytime. The cutting of <i>amun</i> crops continues; the outturn promises to be excellent.
	25 Patna, Nov. 24 '77	Nil	Weather—unusually hot for the time of year. State and prospects of the crops are good, but if this abnormal heat continues, rain will be wanted for the <i>rubbee</i> .
	26 Gya, „ 24 „	Nil	Weather—warm in the middle of the day and sky occasionally clouded over. Maximum thermometer in the shade 89°6". Prospects of the crops are unchanged. Some rain is hoped for and would do much good.
	27 Shahabad, „ 24 „	Nil	Weather—cloudy and hot. In Buxar <i>rubbee</i> crops have been sown and have germinated. In Bhubbounh rice is being harvested; other <i>aghani</i> crops are in bad condition for want of rain; <i>rubbee</i> sowings are about to close, and the young plants are drying in many places for want of rain. No report received from Sasseram. In the head-quarters subdivision <i>rubbee</i> crops are still being sown, and in places where germinated are doing well from being irrigated from canal water. Health of the district is good.
PATNA DIVISION.	28 Darbhunga, „ 24 „	Nil	Weather—unusually warm for this time of the year. The <i>rubbee</i> has germinated well. The low lying <i>dhan</i> lands promise well, but the high land <i>dhan</i> has suffered, and the outturn will not, it is feared, be satisfactory.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BEHAR.—(Continued.)			
PATNA DIVISION.	29 Mozufferpore, Nov. 24 '77	Nil	Weather—warm and unsensational. There is no change to report in the prospects of the crops.
	30 Sarun, „ 24 „	Nil	Weather—bright and clear. East and west wind. No change in the prospects of the crops since last report. <i>Rahar</i> and cotton are good; sugarcane is being cut and put into the mills. Paddy that has been sown is fast ripening in some places; it is being cut. <i>Rubbee</i> has germinated well; rain is much wanted to accelerate a healthy growth. Poppy is being put in the ground. Indigo fields are being prepared for the next year's crop.
	31 Champaran „ „	Return not received.
BAGULPORE DIVN.	32 Monghyr, Nov. 24 „	Nil	Weather—still very hot. Prospects of the crops are unchanged.
	33 Bhagalpore, „ 25 „	Nil	Weather—cloudy and hot. State and prospects of the crops are the same as last week. Cholera and fever are very prevalent.
	34 Purneah, „ 24 „	Nil	Weather—fine. Nights getting cold. Prospects of crops continue fair. <i>Aghani dhan</i> is being cut. Fever is very general, and cholera is reported from two or three places.
	35 Maldah, „ 24 „	Nil	Weather—fair and rather warm. Harvest of <i>amun</i> (coarse kind) has commenced; in some parts a bumper crop is reported, but generally a good average of 12 or 13 annas. The <i>hainanti</i> is nearly ripe and promises well. Fever is still very prevalent, and sporadic cases of cholera have been reported during the week.
	36 Sonthal Pergah, „ 25 „	Nil	Weather—warm and occasionally cloudy. <i>Dhan</i> continues good; rain is wanted for the <i>rubbee</i> .
ORISSA.			
ODISHA DIVN.	37 Cuttack, Nov. 24 '77	Nil	Weather—fine and hot. The crops are doing well. No change from last week.
	38 Pooree, „ 22 „	Nil	Weather—seasonable. In Khoordah it is reported <i>sarad</i> crops are being irrigated in several places. In other parts of the district, where irrigation is not possible, the crops on the high lands are suffering. <i>Leghu</i> crop which survived the drought is being harvested. <i>Sarad</i> rice in some places is coming to ear and in others is in ear. <i>Rubbee</i> , sugarcane, and other miscellaneous crops are thriving. The state of the crops in the tracts situated between the Chilka and the sea is worse than in any other part of the district. Relief is being given to the people of those parts from funds contributed by private individuals. Cholera has made its appearance in the city.
	39 Balasore, „ 23 „	Nil	Weather—cold. No rain in any part of the district, so that the cold-weather crops will be retarded. The <i>dhan</i> crop is doing fairly well, and there is no special change to report since last week. A good deal of sickness prevails in the north of the district.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
40	Bazareebagh, Nov. 23 '77	Nil	No change to report in the state and prospects of the crops.
41	Lohardugga, „ 24 „	Nil	Weather—seasonable and cold. The harvest operations are actively proceeding, and the outturn so far over most part of the district is good. <i>Rubbee</i> crops promise well at present.
42	Singbhoom, „ 23 „	Nil	Weather—seasonable. Nothing to report about the rice crop. The cold-weather crops are doing well. The district is reported healthy.
43	Manbhoom, „ 24 „	Nil	Weather—pleasant. No signs of rain. State and prospects of the crops are much the same as reported last week. Rain is much needed for the <i>rubbee</i> crops.

Published for general information.

The mean pressure of the seven days ... 30.018
 The average pressure of the corresponding period for 20 years ... 29.995

The mean temperature of the seven days ... 73.0
 The average temperature of the corresponding period for 20 years ... 73.0
 The extreme variation of temperature during the seven days ... 22.7
 The maximum-temperature during the seven days ... 85.9

The mean relative humidity during the seven days ... 75
 The average relative humidity of the corresponding period for 24 years ... 70

The total fall of rain from 18th to 24th November ... Nil.
 The average fall of the corresponding period for 24 years ... 0.01
 The total fall from 1st January to 24th November ... 61.11
 The average fall of the corresponding period for 24 years ... 65.51

The mean pressure, temperature, &c., are deduced from observations made at 6h., 10h., 16h., and 22h.; the maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard (Newman's No. 86) formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The direction and movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

f foggy, w dew.

HENRY F. BLANFORD,
 Meteorological Reporter to the Government of India.

Reports of Fluctuation of Traffic on the Tirhoot State Railway for the Month of October 1877.

W. HANBURY WHITE, Lt. R. E., Offg. Traffic Superintendent.

Reports of Fluctuation of Traffic on the East Indian Railway for the Month of October 1877.

EAST INDIAN RAILWAY TRAFFIC MANAGER'S OFFICE, JAMALPORE, THE 17TH NOVEMBER 1877.

Remarks on Traffic of East Indian Railway for four weeks ending 27th October 1877.

THE approximate figures for the period are as follow:—

	Coaching.		Goods.		Total.
	Mds.	Rs.	Mds.	Rs.	Rs.
1877	518,868	7,24,872	52,61,470	18,23,457	25,48,329
1876	453,073	6,20,841	57,05,639	17,90,646	24,26,487
Increase	65,795	95,031	14,93,180	26,811	1,21,842
Decrease					

In coaching traffic the principal increase was at Howrah in connection with the Doorga Poojan Holidays, and with a considerable Hajji pilgrimage for Mecca.

The principal fluctuations in merchandise traffic are—

Increases.			
Coal.	Grain and pulses.	Indigo.	Tea.
Fruits.	Gunny.	Jaggree.	Tobacco.
Ghee.	Hides.	Seeds.	
Decreases.			
Commisariat beer.	Iron.	Salt.	Sugar.
Cotton.	Foreign railway material.	Saltpetre.	Timber.

Increases.		Mds.	Rs.
Coal—Upward		1,57,711	49,729
Downward		1,03,346	16,366
Total		2,61,057	66,095

The upward traffic is, it will be seen, more than double that of last year; this increase is mainly in the supply to foreign railways, and the fact that the earnings from this source are nearly equal to those from the ordinary down coal traffic.

The recent action of the Government of Bengal in removing from the down coal trade the tax of about 6d. a ton towards the Hooghly floating bridge, which the coal does not use—a tax against which the coal-owners, the Railway Company, and the Chamber of Commerce have so long strenuously protested—will no doubt strengthen the local coal interest in the competition with imported coal.

Grain and pulses	18,17,010	133,373
------------------	-----	-----	-----	-----	-----------	---------

The figures under this head are large, and it may be well to show them in tons avoirdupois and in approximate figures—

They then stand thus—

Total—	1877.		1876.	
	Tons.	Rs.	Tons.	Rs.
	83,000	6,15,000	34,500	4,82,000

and in detail—

	1877.		1876.	
	Tons.	Rs.	Tons.	Rs.
Rice	12,500	82,000	6,700	35,000
Wheat	10,500	64,500	23,000	4,76,000
Other cereals	23,000	2,40,000	2,000	12,000
Pulses	35,000	2,28,000	2,500	10,000

The salient features of this table will be seen at a glance, viz. a very heavy decrease in wheat traffic, which is more than counterbalanced in point of weight carried and money earned by a large increase under pulses and the commoner cereals which form the staple food of the country.

The main causes of the double change are obvious: the long drought in the North-Western Provinces led to serious fear of scarcity in the very districts which had been so largely exporting food-grains both for transport to Europe and for consumption in Western and Southern India, when the high prices following on utter failure of crops were ruling.

A rush of grain traffic to the North-Western Provinces, Oudh, and Rohilkhand set in and pressed our resources hard at the very time that more than half our covered wagons were away to the westward of Jubbulpore.

Wheat was fetching a lower price in Calcutta than it was in the wheat-growing districts of the North-West, and the export stopped, while the cheaper grains flowed back to those districts from which the heavy exports had been made under the influence of what may almost be called a panic.

Hides ... Mds. 18,964 Rs. 15,375

There seems to have been a scarcity of hides from Eastern Bengal; possibly the supply was affected by the very severe storm-wave which devastated Backergunge, and North-Western Provinces hides have come forward freely.

Indigo ... Mds. 3,070 Rs. 4,792

This is an increase which is not by any means of a satisfactory character.

The whole of it lies with stations in the North-Western Provinces, where want of rain has forced an early manufacture, but caused it to be a very small one. The prospects of Tirhoot, however, are good, and we may expect a good outturn there.

Seeds ... Mds. 1,19,530 Rs. 16,036

The great bulk of this increase has been in the seed traffic from Patna to the port.

The seed crop has been good in that district and in the districts which feed the railway through Patna, and during the latter part of October the slackening of the demand for carriage of grain to Southern India has given this staple fuller play.

Tea ... Mds. 6,285 Rs. 4,068

Most of this increase is with the Darjeeling tea. Prices are high in Calcutta (some choice lots having reached Rs. 1.9 per lb at auction), and stock is being pushed forward as early as possible.

Tobacco ... Mds. 12,263 Rs. 4,598

The export of tobacco from Calcutta has been considerable, and with good crops in Behar and a considerable demand in the North-Western Provinces, markets (partly owing, no doubt, to the drought in Rohilkund) there has been a satisfactory advance all through this season.

DECREASES.

Cotton ... Mds. 18,379 Rs. 24,988

But little can be said on this subject at present; the new crop has hardly come into the market as yet.

That it is a poor one, I think, with the long drought in the cotton-growing districts, there can be little doubt, but information of any reliable character is difficult to get as yet.

Iron ... Mds. 14,142 Rs. 16,763

There was a large despatch in October 1876 for the Government work-shops at Roorkee, and none this year; this was the principal cause.

There was an absence of demand in the Calcutta markets, and some sales were effected at a low price for re-export to Australia.

Foreign railway materials ... Mds. 45,521 Rs. 1,00,091

The despatches last year at this time were mainly rails and other Public Works material for the State railways in Rajpootana and the Punjab and wagon-bodies and frame-work for the Oudh and Rohilkund Railway; little of this material has been required this season in comparison.

Salt ... Mds. 1,12,974 Rs. 32,836

There has been a large decrease in the exports from Rajpootana, on which I am not at present prepared to express an opinion.

Saltpetre ... Mds. 13,081 Rs. 7,296

This decrease is almost exactly the same as that shown in my September's report, and the two together just balance the increase in August.

Sugar ... Mds. 9,016 Rs. 3,148

This is a small decrease comparatively, the traffic being a large one; and the serious failure of the sugar crops in Rohilkund is more than sufficient to account for it, looking at the large exports thence this year.

The train mileage run during the period has been—

	Coaching.	Goods.	Total.
1877	172,404	404,025	577,419
1876	171,800	323,931	495,731
Increase	804	804	81,798
Decrease			

Earnings per train mile.

	Coaching. Rs. A. P.	Goods. Rs. A. P.	Total. Rs. A. P.
1877	4 3 3	4 8 1	4 6 7
1876	3 10 8	5 3 0	4 14 4
Increase	0 3 7		
Decrease		1 0 8	0 7 9

Jubbulpore Line Traffic.

	Coaching.		Goods.		Total. Rs.
	Nos.	Rs.	Mds.	Rs.	
1877	21,973	69,827	8,75,091	2,04,030	2,00,447
1876	23,300	68,579	8,33,333	89,011	1,58,490
Increase	913		5,12,359	1,10,700	1,01,957
Decrease		8,762			

The merchandise earnings and weight listed are more than doubled; wagons coming home from the Great Indian Peninsula line found grain which had originally been booked for Western and Southern India ready to take advantage of the sudden rise in prices in the North-West, and loaded on the return journey instead of returning empty to our main line.

GENERAL REMARKS.

Grain Traffic.

In continuation of my remarks under the head of grain, I may remind you of recent reports, in which I have pointed out that the prospects of next season's wheat traffic depend very largely on the Christmas rains.

Should these come as usual and replenish the wells and tanks in the wheat-growing districts which have been so seriously desiccated, the means of artificial irrigation will be available for the spring crops.

Should the Christmas rains fail, however, there will probably be serious pressure in North-Western Provinces, and little or no export grain available.

I annex the usual statement of traffic to Howrah and old Jubbulpore; the latter has fallen off very much with improved prospects in the Madras Presidency and the threatened scarcity in Northern India.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the Crops in the different Districts of Bengal, as reported to Government during the week ending the 1st December 1877.

No.	District, and date of return.		Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.				
Western Districts.				
BURDWAN DIV.	1	Burdwan, Dec. 1 '77	Nil	Winter rice crop is being reaped. <i>Rubbee</i> sowings are nearly completed. Fever is prevalent.
	2	Bankoora, " 1 "	Nil	Weather—clear and bright, but warmer than is usual in this season. All the crops, especially the winter rice, which is not yet reaped, look extremely well.
	3	Beerbhoom, " 1 "	Nil	Weather—dry and warm for the time of year. The cold-weather crops are doing well. Rain would, however, be of service to them, but it would be very detrimental to the rice now being everywhere reaped.
	4	Midnapore, " 1 "	Nil	Weather—warm, but cooler since 30th November. State and prospects of the crops are fair. Fever is still very prevalent, though it is apparently a little better.
	5	Hooghly, " 1 "	Nil	Weather—unusually warm for the season. Harvest of late rice is going on. <i>Rubbee</i> -seedlings are doing well. Fever is very prevalent. Cholera has appeared in a sporadic form.
	Howrah, " 3 "	Nil	Weather—much too hot for the season early in the week, cooler at the end. The harvest is progressing on the high lands. No change in the prospects. A great deal of fever about, especially in the north of the district.	
Central Districts.				
PRESIDENCY DIV.	6	24-Pergunnahs, Dec. 1 '77	Nil	Weather—fair, but unseasonably warm. State and prospects of the crops are good. Sporadic cases of cholera and fever are numerous.
	7	Nudda, " 1 "	Nil	Weather—still hot. The outturn of <i>amun</i> rice in Kooshtea is poor. The cold-weather crops promise well. Cholera is prevalent in many parts of the district.
	8	Jessore, " 1 "	Nil	Weather—unseasonably warm. <i>Amun</i> is being reaped; the yield in Bagirhat and Jhenidah will not be more than 10 annas. Winter crops are doing well, but some rain is looked for. Fever and cholera are prevalent.
	9	Moorshedabad, " 1 "	Nil	Weather—abnormally hot during the early part of the week, but the last two days have been cooler. The <i>amun</i> harvest has commenced, with the prospect of an outturn generally above the average. The spring crops so far promise well. Cholera is prevalent in several thanas of the district and is apparently spreading. There is much fever in Berhampore.
	10	Dinagepora, Nov. 30 "	Nil	Weather—somewhat warm, with wind from the west. Rice crop is very good. Reaping of barley has commenced. There have been 13 deaths from cholera against 10 deaths reported last week, principally in the southern thanas. One case at Allowakhowa fair.
	11	Rajshahye, Dec. 1 "	Nil	No rain during the week. Days are warm for this season of the year. Heavy dew at night. A little rain is wanted for <i>rubbee</i> crops. Reaping of <i>ropa</i> and <i>bora dhan</i> continues. Fever is still prevalent, and some cases of cholera have been reported during the week.
	12	Rungpore, Nov. 30 "	Nil	The weather has become much cooler. A south-westerly wind blows all day and makes the evening cool. The state and prospects of the crops continue to be satisfactory. The harvest of the <i>amun</i> crop has commenced and a good outturn is expected. Fever of the ordinary intermittent type is common. Cholera of an epidemic character prevails in three of the four thanas of the Gaibanda sub-division.
	13	Bogra, Dec. 1 "	Nil	Weather—clear and rather warm for the time of year. Prevailing wind is from north to west. The <i>amun</i> crop, which is now being reaped, is a capital one. The <i>rubbee</i> crops are looking well. New rice is selling in the interior from 30 to 35 seers for the ropae. Cholera of a bad type is still prevalent, chiefly in the eastern part of the district. There have been 1,043 fatal cases since its appearance in this district.
	14	Pubna, " 1 "	Nil	Weather—clear and seasonable. Reaping of <i>amun</i> paddy is nearly completed. State and prospects of <i>haimanti</i> crops are favourable. Fever is still going on as before, and cholera has appeared both in the town and mofussil.
	RAJSHAHY AND COCH BEHAR DIV.			

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—(Continued.)			
<i>Central Districts.</i>			
RAJSHAHY AND COOCH BEHAR DIV.	15 Darjeeling, Nov. 30 '77	Nil	Frosty mornings, with bright weather during the early part of the day; hazy towards evening, threatening rain. The crops throughout the district are progressing favorably. The early <i>haimunti</i> rice is being reaped in some places.
	16 Julpigoree, Dec. 1 "	Nil	Weather—pleasantly cool. Harvesting of <i>haimunti</i> rice is going on throughout the district. Transplantation of tobacco plants is progressing well. Public health is not yet good. Fever is still prevalent in the town of Julpigoree.
	Cooch Behar, Nov. 29 "	Nil	Weather—fair and bright. The cold weather is gradually setting in. The prospects of the crops are good. <i>Amun</i> rice is being reaped, and an average ten-anna crop is expected. The cold-weather crops in the ground are getting on well. Transplantation of the tobacco plants has commenced. Fever is still prevalent in some parts of the district, especially in the Mekligunge sub-division. Public health is otherwise good for the season.
<i>Eastern Districts.</i>			
DACCA DIV.	17 Dacca, Dec. 1 '77	0.08	Weather—close and hot. The rain was only local. State and prospects of the crops are satisfactory.
	18 Furreedpore, " 1 "	Nil	Weather—rather hot in the day. Mornings cool. State of the crops is fair. <i>Amun</i> is being reaped.
	19 Backergunge, Nov. 29 "	Nil	The reaping of <i>amun</i> has begun. Owing to the drought, the crops to a certain extent have been damaged on high lands in the sub-division of Dukhin Shabazpore. The sky appears now and then cloudy, and great apprehension is felt that grubs would be generated and damage done to the standing crops, but fortunately the clouds disappear. The markets are well supplied, and the price of rice has gone down. Cholera and fever still continue in the police stations of Nalchiti, Backergunge, Gournadi, Mendigunge, Sharupkati, Perozepore, and Matbaria, but very few cases of death are reported from those places.
	20 Mymensingh, " 30 "	0.10	Weather—fine. State and prospects of the crops are excellent.
CHITTAGONG DIV.	21 Tipperah, " 30 "	Nil	Weather—cloudy and sultry; very warm for the time of year. Prospects of all the crops are good.
	22 Chittagong, " 29 "	Nil	Days are still warm, nights are cool. In the south the early <i>amun</i> has been reaped. Prices there are very low. The crops elsewhere are very good.
	23 Noakholly, " 29 "	Nil	Weather—unusually warm. The early <i>amun</i> crops are being reaped. Prospects are fair. Sporadic cases of cholera occur in Ramgunge and Lukhipore.
	24 Chittagong Hill Tracts, " 27 "	Nil	Weather—seasonable. The gathering of paddy crop of the plough cultivators still continues. Mustard is growing well. Cotton is sold in small quantities in the local markets.
	Hill Tipperah, " 28 "	0.22	Weather—rather warm for the time of year. Slight rain fell on the night of the 27th November. State and prospects of the crops are satisfactory.
BEHAR.			
PATNA DIVISION.	25 Patna, Dec. 1 '77	Nil	Weather—hot during the early part of the week; cold during the latter part. State and prospects of the crops are favourable, but a little rain would do good.
	26 Gya, " 1 "	Nil	Weather—latterly cool and clear. The signs of coming rain have disappeared; maximum thermometer in the shade 90° 8". The unusual heat of November, with consequent absence of dews at night, has not been favourable for the <i>rubbee</i> . The <i>khurreef</i> harvest has commenced, and in places the cutting of <i>koorthi</i> . The Nowada and Jehanabad officers estimate the outturn of the former at 12 and 4 annas respectively. It is believed that the average of the district will not be over 8 annas. The average in Jehanabad will probably not be quite so low as 4 annas.
	27 Shahabad, " 1 "	Nil	Weather—cool. Rain is urgently necessary for the <i>rubbee</i> , except where the Sone and artificial irrigation is available.
	28 Durbhanga, " 1 "	Nil	Weather—seasonably cold. The rice harvest is commencing, but nothing definite can be said as to the extent of deficiency which is apprehended in the upland rice. The <i>rubbee</i> crops look well. Public health is good.
	29 Mozafferpore, " 1 "	Nil	Weather—cold, with west wind. There is no change in the prospects of the rice crop. The <i>rubbee</i> crops are doing well, except in Seetamarhee sub-division, where prospects are unfavourable.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BEHAR.—(Continued.)			
PATNA DIVISION.	30 Sarun, Dec. 1 "	Nil	Weather—fair and rather warm at the beginning of the week. There has been, however, a marked change in the last two days. Prospects of the crops continue fair. Rain during the month will do much good. Prices are stationary. Public health is good.
	31 Chumparnoo, " 3 "	Nil	The latter part of the week has been much colder. No material change is to be reported in the prospects of the crops. Rain is urgently required for the <i>rubbee</i> , especially in the south and south-east portions of the sudder division. No rain fell throughout November, and the fall up to date has been only half the average. There will be a very large falling off in poppy sowings in consequence of want of moisture in the southern part of the district.
	32 Monghyr, " 1 "	Nil	Weather—still very hot. If there be Christmas rains, an eight-anna crop may be expected, if not, the chances will be much worse.
BAGULPORE DIV.	33 Bhagulpore, " 3 "	Nil	Weather—cold, with westerly wind and clear sky. <i>Aghani</i> harvest has commenced. Prospects are favourable. Cholera and fever are on the decrease.
	34 Purneah, " 1 "	Nil	West wind during the day; the weather is getting colder at night. The <i>aghani</i> crop will be about 12 annas. In some parts of the north of the district it is very good. It is now being cut. Mustard is coming generally into flower; its prospects are good. Transplanting and weeding of tobacco are well forward. General health is very bad; fever of a bad type is prevalent, and cholera is reported from a few villages.
	35 Maldah, " 1 "	Nil	Weather—unseasonably hot till the 30th November. State and prospects of the crops are satisfactory. The health of the district is very bad. Fever prevails. Cholera is increasing; 21 deaths have been reported during the week, but from so many and such widely scattered villages that aid cannot easily be afforded.
	36 Sonthal Pergahs., " 2 "	Nil	Weather—dry and getting colder, with a few clouds about. Rice is excellent in the low lands of Deoghur, in the Godda Damin, and in Doomka. It is not so good in the Godda zemindaries. 13 annas all round seem the proper estimate. Rain is wanted everywhere for <i>rubbee</i> crops. Health is good.
ORISSA.			
ORISSA DIV.	37 Cuttack, " 1 "	Nil	Weather—fine and warm for the time of year. Early <i>sarad</i> is being reaped and coming to market. Late <i>sarad</i> is ripening. <i>Rubbee</i> is in good condition and is flowering. Cholera is prevalent in Kendrapara sub-division and some other places.
	38 Pooree, Nov. 29 "	Nil	Weather—fair; warm for the season. The state of the crops in the Khoordah sub-division is nearly the same as reported last week. In many parts of the sub-division the <i>sarad</i> crop is suffering for want of rain, but other winter crops are doing well. Rice is selling cheaper, owing to the sale of Government paddy throughout the sub-division. In other parts of the district the <i>sarad</i> rice is in ear. The <i>laghu</i> has been harvested and reaped in some places. Miscellaneous crops, viz. mustard, <i>arkur</i> , &c., are promising well. <i>Dalus</i> rice is being sown, and in some places the plants are being transplanted. The state of the crops on the Chilka tracts is worse than before.
	39 Balasore, " 30 "	Nil	Weather—warm for the season. No special change to report. The harvest has commenced. A little cattle disease is reported from the district, and a few cases of cholera, and in the north, of fever.
CHOTA NAGPORE.			
South-West Frontier Agency.			
40	Hazareebagh, Nov. 30 '77	Nil	Weather—seasonable. <i>Rubbee</i> sowings have been completed. Rain would be beneficial.
41	Lohardugga, Dec. 1 "	Nil	Weather—unusually warm for the time of year. Rain seems impending. There is nothing further to report regarding the rice crops. Harvest operations are still proceeding. Rain is required for the <i>rubbee</i> crops.
42	Singbhoom, Nov. 30 "	Nil	Weather—seasonable. The cold-weather crops are doing well. The district is healthy.
43	Manbhoom, Dec. 1 "	Nil	Very uncertain weather; one day it is cloudy and another day it is bright and hot. The cold weather can hardly be said to have set in. Another peculiarity is that even on a cloudless night no dew falls. Nothing to report from the sudder sub-division in addition to what was said last week; but from Govindpore, the sub-divisional officer reports the outturn of <i>dhus</i> to be not more than eight annas, and, as regards the <i>rubbee</i> , he says the prospects are not favourable. Rain would be a great boon just now.

Published for general information.

The average temperature of the corresponding period for 20 years ... 71.4
The extreme variation of temperature during the seven days ... 22.2
The maximum temperature during the seven days ... 86.0

The mean relative humidity during the seven days ... 75
The average relative humidity of the corresponding period for 24 years ... 71

Inches.

The total fall of rain from 25th November to 1st December ... Nil.
The average fall of the corresponding period for 24 years ... Nil.
The total fall from 1st January to 1st December ... 61.11
The average fall of the corresponding period for 24 years ... 65.51

The mean pressure, temperature, &c., are deduced from observations made at 6h., 10h., 16h., and 22h.; the maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard (Newman's No. 86) formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The direction and movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

f foggy, *w* dew.

HENRY F. BLANFORD,

Meteorological Reporter to the Government of India.

METEOROLOGICAL OFFICE, INDIA,

The 3rd December 1877.

Reports of Fluctuation of Traffic on the Eastern Bengal Railway for the Month of October 1877.

EASTERN BENGAL RAILWAY COMPANY, TRAFFIC SUPERINTENDENT'S OFFICE.

Report on the Traffic for the four weeks ending the 27th October 1877.

Dated Calcutta, the 24th November 1877.

From—WILLIAM INNES, Esq., Deputy Traffic Superintendent,

To—The Agent, Eastern Bengal Railway, Scaldah.

THE quantity of goods carried during this period amounted to 8,21,840 maunds as compared with 7,05,052 maunds carried during the same period of last year, shewing an increase of 1,16,788 maunds.

This increase was chiefly composed of the following staples, viz.—

Bundles and bales of cotton, grain including rice, bundles and bales of hides, jute drums, piece-goods, twist and miscellaneous goods.

The staples showing the largest decreases are bales of gunny, bales of jute, railway material foreign, salt, seeds, sugar, tea, tobacco and turmeric.

Increases.

Bundles and bales, cotton ... Mds. 552 Bds. 1,256
The increase of the above staple is owing to the larger import of cotton from the Eastern districts, and to the increased quantity of raw material sent to the Dunbar Cotton Mills, Shamuagar, for manufacture.

Grain, including rice ... Mds. 1,13,476
This increase is attributable to the additional quantities brought down for export before the stoppage of export to the famine districts.

Bundles and bales of Hides ... Mds. 40,814 Bales 761
This increase is owing to a greater demand in the market, which fluctuates.

Jute drums ... Mds. 80,804
This small increase is, I regret to say, more than counterbalanced by the decrease in bales, which is 84,804 maunds.

Piece-goods ... Mds. 5,858
This article again shows a very satisfactory increase.

Twist ... Mds. 938
This shows a smaller increase than last month which is still however satisfactory, and owing to the twist manufactured at the Shamuagar mills being brought down for export.

Miscellaneous goods ... Mds. 18,990
The increase in these goods still continues to be satisfactory.

Decreases.

Gunny bales ... Mds. 3,464
This staple, which is of the Serajganj Jute Mills manufacture for export, shows a large decrease this month partly counteracted by an increase of 1,791 maunds in the quantity of bundles of gunny carried.

Jute, bales ... Mds. 84,246
This is a large decrease which, with the 80,804 maunds increase of jute drums, shows an actual decrease of 3,442 of this staple owing to the depressed state of the market.

Railway material, foreign ... Mds. 12,955
This decrease is owing to smaller quantities of material for the Northern Bengal State Railway having been despatched.

Salt ... Mds. 10,925
This still shows a decrease, but the quantities lately despatched continue to improve rapidly.

Sugar ... Mds. 9,990
This shows a large decrease owing to there being little or none in the manufacturing districts to forward.

Tobacco and turmeric ... Mds. 8,733 5,973
These staples show still a large decrease owing to there being little demand for them in the market.

I attach the usual statement showing the increases and decreases of the principal staples.

EASTERN BENGAL RAILWAY.

Statement shewing Increases and Decreases in mawndage of staples carried over the line for the four weeks ending the 27th October 1877, as compared with the corresponding period of 1876.
